Parts marked with " $\lfloor$. " are important for maintaining the safety of the set.
Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

## CAUTION

This product is a class 1 laser product that complies with 21CFR 1040.10 and 1040.11 of the CDRH standard and IEC825. This means that this machine does not produce hazardous laser radiation. The use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
This laser radiation is not a danger to the skin, but when an exact focusing of the laser beam is achieved on the eye's retina, there is the danger of spot damage to the retina.
The following cautions must be observed to avoid exposure of the laser beam to your eyes at the time of servicing.

1) When a problem in the laser optical unit has occurred, the whole optical unit must be exchanged as a unit, not as individual parts.
2) Do not look into the machine with the main switch turned on after removing the developer unit, toner cartridge, and drum cartridge.
3) Do not look into the laser beam exposure slit of the laser optical unit with the connector connected when removing and installing the optical system.
4) The middle frame contains the safety interlock switch.

Do not defeat the safety interlock by inserting wedges or other items into the switch slot.

## Warning!

This product is a class A product.
If it is operated in households, offices or similar surroundings, it can produce radio interferences at other appliances, so that the user has to take adequate countermeasures.

## CLASS 1 LASER PRODUCT

## LASER KLASSE 1

## LUOKAN 1 LASERLAITE

## KLASS 1 LASERAPPARAT

CAUTION
invisible Laser radiation,
WHEN OPEN AND INTERLOCKS DEFEATED. AVOID EXPOSURE TO BEAM.

VORSICHT
UNSICHTBARELASERSTRAHLUNG, WENN ABDECKUNG GEÖFFNET UND SICHERHEITSVERRIEGELUNG ÜBERBRÜCKT. NICHT DEM STRAHL AUSSETZEN.

## [1] GENERAL

## 1. Note for servicing

## Pictogram

The label $(\mathbb{\Perp})$ in the fusing area of the machine indicates the following:
$\triangle$ : Caution, risk of danger
$\triangle$ : Caution, hot surface

## A. Warning for servicing

-The fusing area is hot. Exercise care in this area when removing misfed paper.
-Do not look directly at the light source. Doing so may damage your eyes.

## B. Cautions for servicing

-Do not switch the machine rapidly on and off. After turning the machine off, wait 10 to 15 seconds before turning it back on.

- Machine power must be turned off before installing any supplies.
-Place the machine on a firm, level surface.
-Do not install the machine in a humid or dusty location.
-When the machine is not used for a long time, for example, during prolonged holidays, turn the power switch off and remove the power cord from the outlet.
-When moving the machine, be sure to turn the power switch off and remove the power cord from the outlet.
-Do not cover the machine with a dust cover, cloth or plastic film while the power is on. Doing so may prevent heat dissipation, damaging the machine.
- Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous laser radiation exposure.
-The socket-outlet shall be installed near the machine and shall be easily accessible.

## C. Note for installation place

Improper installation may damage the machine. Please note the following during initial installation and whenever the machine is moved.
Caution: If the machine is moved from a cool place to a warm place, condensation may form inside the machine. Operation in this condition will cause poor copy quality and malfunctions. Leave the machine at room temperature for at least 2 hours before use.

## Do not install your machine in areas that are:

-damp, humid, or very dusty

-exposed to direct sunlight

-subject to extreme temperature or humidity changes, e.g., near an air conditioner or heater.

The machine should be installed near an accessible power outlet for easy connection and disconnection.
Be sure to connect the power cord only to a power outlet that meets the specified voltage and current requirements. Also make certain the outlet is properly grounded.

Note : Connect the machine to a power outlet which is not used for other electric appliances. If a lighting fixture is connected to the same outlet, the light may flicker.

Be sure to allow the required space around the machine for servicing and proper ventilation.

## [2] SPECIFICATIONS

## 1. Copy mode

## A. Type

| Type | Desk-top |
| :--- | :--- |
| Paper exit | Wing less |

## B. Machine composition

| AR-M160 | 16-CPM multi function model |
| :--- | :--- |
| AR-M205 | 20-CPM multi function model |

(1) Option

| Machine | Model |  |
| :--- | :--- | :--- |
| 250 sheets paper feed unit | AR-D24 |  |
| 250 sheets $\times 2$ paper feed unit | AR-D25 |  |
| SPF | AR-SP6 | AR-M160 only |
| RSPF | AR-RP6 | AR-M205 only |
| Original cover | AR-VR5 |  |
| Dual function board | AR-EB7 |  |
| Network expansion kit | AR-NB2 | Available from October |
| PS3 expansion kit | AR-PK1/N | option for AR-NB2 |
| 256MB optional memory | AR-SM5 |  |

## C. Copy speed

(1) Scan One Print many

AR-M205 / M160 Available
Condition: Copy speed in the normal copy from all the paper feed ports including the manual paper feed port.
(2) Continuous copy speed (Sheets/min)
a. AR-M160

| Remaining quantity detection | Cassette section | Only empty detection available |
|  | Manual tray | Only empty detection available |

## (1) Paper feed section of the copier

| Paper feed <br> size | A3, B4, A4, A4R, B5, B5R, A5 <br> $11 " \times 17^{\prime \prime}, 8.5 " \times 14^{\prime \prime}, 8.5 " \times 13^{\prime \prime}, 8.5^{\prime \prime} \times 11^{\prime \prime}$, <br> $8.5^{\prime} \times 111^{\prime} R, 8.5^{\prime \prime} \times 5.5^{\prime \prime}$ <br> (For A5 and 8.5" $\times 5.5^{\prime \prime}$, only No. 1 tray available.) |
| :--- | :--- |
| Side front | Front |
| Paper feed <br> capacity | 250 sheets <br> (56 $\sim 90 \mathrm{~g} / \mathrm{m}^{2}$ equivalent) $(15 \sim 21 \mathrm{lbs})$. |
| Detection | Paper empty detection available, size detection <br> (by key input) |
| Weight | $56 \sim 90 \mathrm{~g} / \mathrm{m}^{2}(15 \mathrm{lbs} . \sim 21 \mathrm{lbs})$. |
| Special paper | Recycled paper |

(2) Manual paper feed section

| Paper feed <br> size | A3 $\sim$ A6, $11^{\prime \prime} \times 17^{\prime \prime} \sim 8.5^{\prime \prime} \times 5.5^{\prime \prime}$ |
| :--- | :--- |
| Paper feed <br> capacity | 100 sheets $\left(56 \sim 80 \mathrm{~g} / \mathrm{m}^{2}\right)$ |
| Detection | Size detection not available, <br> paper empty detection available |
| Weight | $56 \sim 200 \mathrm{~g} / \mathrm{m}^{2}(15 \sim 34 \mathrm{lbs})$. |
| Special paper | Recycled paper, OHP film, labels |
| Paper feed | Single except for recycled paper |

(3) Option paper feed unit

|  | 1-step paper feed unit | 2-step paper feed unit |
| :---: | :---: | :---: |
| Model | AR-D24 | AR-D25 |
| Paper feed size | $\begin{aligned} & \text { A3, B4, A4, A4R, B5, B5R } \\ & 11 " \times 17 ", 8.5^{\prime \prime} \times 14 ", 8.5^{\prime \prime} \times 13^{\prime \prime}, \\ & 8.5^{\prime \prime} \times 11 ", 8.5^{\prime \prime} \times 11^{\prime \prime} \end{aligned}$ |  |
| $\begin{aligned} & \text { Capacity } \\ & \left(56 \sim 80 \mathrm{gm}^{2}\right) \end{aligned}$ | About 250 sheets $x$ 1 step | About 250 sheets x 2 steps |
| Paper weight | $56 \sim 90 \mathrm{~g} / \mathrm{m}^{2}$ (15 ~ 21 lbs .) |  |
| Moisture preserving heater | None |  |
| Paper empty detection | Available |  |
| Paper size setting | User setting Paper size detection:None |  |
| External dimensions $(\mathrm{W} \times \mathrm{D} \times \mathrm{H})$ | $590 \times 471 \times 88 \mathrm{~mm}$ | $590 \times 471 \times 173.5 \mathrm{~mm}$ |
| Weight | About 4.7kg | About 10kg |
| Special paper | Recycled paper |  |
| Power | Supplied from the machine |  |

G. Job speed

| S-S (1st step) | $100 \%$ (document replacement rate) |
| :--- | :--- |

Condition:With SPF/RSPF A4/Letter Normal 1cassette
H. Multi copy

| Max. number of multi copy | 999 sheets |
| :--- | :--- |

## I. Warm-up time

| Warm-up time | 45 sec |
| :--- | :--- |
| Pre-heat | Available |
| Jam recovery | Within 45 sec |

## J. Copy magnification ratio

| Fixed <br> magnification <br> ratio | AB system: <br> $50,70,81,86,100,115,122,141,200 \%$ |
| :--- | :--- |
|  | Inch system: <br> $50,64,77,95,100,121,129,141,200 \%$ |
| Zooming | $25 \sim 400 \%$ <br> SPF/RSPF(50 ~ 200\%) |
| Independent <br> zooming(vertical) | Available (25 ~ 400\%) <br> SPF/RSPF(50 ~ 200\%) |
| Independent zooming <br> (horizontal) | Available (25 ~ 400\%) <br> SPF/RSPF(50 ~ 200\%) |

## K. Print density

| Density mode | Auto / Text / Photo |
| :--- | :--- |
| No. of manual <br> adjustment | 5 steps (Text / Photo) |
| Resolution | Writing: $600 \times 600 \mathrm{dpi}$ <br> Reading: 600 (main) $\times 600$ (sub) (PHOTO mode) <br> 600 (main) $\times 300$ (sub) (AE mode) |
| Gradation | Reading: 256 gradations <br> Writing: Binary |
| Toner save mode | Set by the user program |

## L. Void width

| Void area | Lead edge $1 \sim 4 \mathrm{~mm}$, <br> rear edge 4mm or less, <br> both sides 4mm or less |
| :--- | :--- |
| Image loss | 4 mm or less |

## M. Auto duplex

| Standard/ | Standard provision (AR-M205 only) |
| :--- | :--- |
| Option | $(D \rightarrow D / D \rightarrow$ S enable only when RSPF is installed) |
|  | Not available for AR-M160 |

## N. Paper exit / finishing

| Paper exit section <br> capacity | Face down 250 sheets |
| :--- | :--- |
| Full detection | None |
| Finishing | Dual function board: <br> Option (AR-EB7) |
| Electronic sort <br> capacity | A4 (8.5" $\left.\times 11^{\prime \prime}\right)$ standard document 100 sheets |
| Offset function | Available (by the shifter) |
| Staple function | None |

(1) Electronic sort board (Option)

| Electronic sort | Sorting | 100 sheets of A4 standard documents |
| :---: | :---: | :---: |
|  | Grouping | 100 sheets of A4 standard documents |
| Rotation copy | If there is paper of same size as the document, the image is rotated to copy even though the paper is set in the different direction from the document direction. |  |
| 2 in 1, 4 in 1 | Copies of 2 pages or 4 pages are integrated into one surface. Divided by solid lines, (Selectable by the user program.) |  |
| Edge erase | Images surrounding the document are erased when copying. (Adjustable in $5 \sim 20 \mathrm{~mm}$ by the user program.) |  |
| Center erase | The image at the center is erased when copying. (Adjustable in 5 ~ 20mm by the user program.) |  |
| Margin shift | Binding margin is made at the left edge of the set documents. <br> (Adjustable in $5 \sim 20 \mathrm{~mm}$ by the user program.) |  |
| Memory for electronic sort | 16MB |  |
| * Memory loading capacity | A4 standard 100 pages |  |
| Memory expansion | DIMM memory slot x 1, max. $256 \mathrm{MB} \times 1$ slot + 16MB (Max. 272MB in total) |  |
| USB2.0 | Standard provision of E-sort |  |
| SPLC (JBIG-GDI) | Supported when E-sort is installed. |  |
| ROPM | Supported when E-sort is installed. |  |

## O. Additional functions

| APS | 0 |  |
| :---: | :---: | :---: |

| Preheating | 0 | The conditions are set by the user program. |
| Auto shut-off | 0 | The conditions are set by the user program. |
| User programming | 0 |  |
| Total counter | 0 | Supports Total counter, Scan counter, and Copy counter. |
| Coin vendor support | 0 | (Supports I/F only.) |
| Auditor support | 0 | (Supports I/F only.) |
| Duplex | 0 | (Standard provision for the model of 20sheet model only) |
| Toner save | 0 | (Set according to the destination) |
| Department management | 0 | (Copy: 20 Dept.) |

O : Available
$\Delta$ :Installation of the option is required.
X : Not available
P. Other specifications

| Photoconductor type | OPC (Organic Photo Conductor) |
| :--- | :--- |
| Photoconductor drum dia. | 30 mm |
| Copy lamp | Cold cathode fluorescent lamp (CCFL) |
| Developing system | Dry 2-component magnetic brush <br> development |
| Charging system | Saw teeth charging |
| Transfer system | (+) DC corotron |
| Separation system | (-) DC corotron |
| Fusing system | Heat roller |
| Cleaning system | Contact blade |

## Q. Package form

| Body | Body / Accessories |
| :--- | :--- |

## R. External view

| External dimensions <br> $(W \times D \times H)$ | $590 \times 577 \times 520 \mathrm{~mm}$ (AR-M205) <br> $590 \times 577 \times 470 \mathrm{~mm}$ (AR-M160) |
| :--- | :--- |
| Occupying area <br> $(W \times D)$ | $590 \times 531 \mathrm{~mm}$ <br> (When the manual tray is installed.) |
| Weight | About 31.3kg (AR-M160) <br> About 35.1 kg (AR-M205) |

## S. Power source

| Voltage | AC120V, 220V, $230 \mathrm{~V}, 240 \mathrm{~V} \pm 15 \%$ |
| :--- | :--- |
| Frequency | $50 / 60 \mathrm{~Hz}$ common |

## T. Power consumption

| Max. power consumption | 1200 W |
| :--- | :--- |

* EnergyStar conformity

| Average power consumption in <br> operation | Less than 550W |
| :--- | :--- |
| Power consumption when <br> standby | 5 W (Not include option) |
| Energy consumption efficiency | Less than 25W |

## U. Digital performance

| Resolution | Reading | $600 \times 600 \mathrm{dpi}$ <br> $600 \times 300 \mathrm{dpi}$ (PHE mode) |
| :--- | :--- | :--- |
|  | Writing | $600 \times 600 \mathrm{dpi}$ |
| Gradation | Reading | 256 gradations |
|  | Writing | Binary |
| Memory | Simplex:16MB Duplex:32MB |  |
| Hard disk | None |  |

## V. Printing function

| Print speed | <Standard>12ppm <br> (With the AR-EB7 installed) <br> $16 p p m ~(A R-M 160) ~ / ~ 20 p p m ~(A R-M 205) ~$ |
| :--- | :--- |
| Data resolution | 600 dpi |
| Option memory | 16 MB (with the AR-EB7 installed) <br> 256MB (AR-SM5) can be added to the AR-EB7. |
| Printer driver | Two drivers for the case when the AR-EB7 is <br> installed and when it is not are automatically <br> installed by plug \& play. <br> <Standard> SHARP GDI driver <br> <with the AR-EB7 installed> SPLC driver |

## W. Scanner function

| Type | Flat bed color scanner |
| :--- | :--- |
| Scan system | Document table/document feed unit |
| Light source | White CCFL |
| Resolution | Basic 600 x 1200dpi <br> Set range: $50 \sim 9600$ dpi |
| Document | Sheet/Book |
| Effective scan range | OC/SPF: about 297(length) x 431(width) mm |
| Scan speed | OC/SPF: 2.88msec/line (Color) |
| Input data | 1bit or 12bit |
| Output data | 1bit or 8bit |
| Scan color | Black and white binaryGray scaleFull color |
| Protocol | TWAIN/WIA (XP only) / STI |
| Interface | USB1.1 <br> USB2.0 <br> (Option support: High-speed mode/Full speed <br> mode (Switched by the user program.)) <br> (Supported when E-sort is installed) |
| Scanner utility | Sharp Desk/Button Manager |
| Drop-out color | Provided |
| Scanner button | Provided (6) |
| Supported OS | Windows98/ME/2000/XP |
| Void area | Lead edge/rear edge (2.5mm) on the driver <br> side Left/right: 3.0mm |
| WHQL support | Yes |

## [3] CONSUMABLE PARTS

## 1.Supply system table

## A.USA/CANADA/Latin America

| NO | Name | Content |  | Life | Product name | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Toner cartridge(Black) <With IC> | Toner (Toner: Net Weight 537g) Vinyl bag | $\begin{aligned} & \mathrm{x} 10 \\ & \mathrm{x} 10 \end{aligned}$ | 160K | AR-202MT | Life setting by A4 6\% document |
| 2 | Developer | Developer <br> (Developer : Net Weight 400g) | $\times 10$ | 500K | AR-202MD |  |
| 3 | Drum kit | Drum Drum fixing plate | $\begin{aligned} & \hline \mathrm{x} 1 \\ & \mathrm{x} 1 \end{aligned}$ | 50K | AR-202DR |  |

## B. Middle East/Africa/Taiwan/Philippine

| NO | Name | Content |  | Life | Product name | Remark |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Toner cartridge(Black) <With IC> | Toner (Toner: Net Weight 537g) Vinyl bag | $\begin{aligned} & \times 10 \\ & \times 10 \end{aligned}$ | 160K | AR-202ET | Life setting by A4 6\% document |

## 2. Environmental conditions

A. Transport conditions
(1) Transport conditions

(2) Storage conditions

B. Use conditions

## C. Life(packed conditions)

Photoconductor drum ( 36 months from the production month) Developer, toner ( 24 months from the production month)

## 3. Production number identification

## <Toner cartridge>

The label on the toner cartridge shows the date of production.

## <Drum cartridge>

The lot number, printed on the front side flange, is composed of 6 digits, each digit showing the following content:

| 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :--- | :--- | :--- | :--- | :--- |

1 Alphabet
Indicates the model conformity code. A for this model.
2 Number
Indicates the end digit of the production year.
3 Number or X, Y, Z
Indicates the month of packing.
X stands for October, Y November, and Z December.
4/5 Number
Indicates the day of the month of packing.
6 Alphabet
Indicates the production factory. "A" for Nara Plant, "C" for SOCC

## [4] EXTERNAL VIEWS AND INTERNAL STRUCTURES

## 1. Appearance

| 1 | Document feeder cover (when the SPF/ <br> RSPF is installed) /document cover <br> (when the document cover is installed) | 2 | Document glass | 3 | Handles |  |  |

| 25 | PAPER SIZE ENTER key | 26 | SPR/RSPF indicator (when the SPF/RSPF is installed) | 27 | TRAY SELECT key (©) |
| 28 | AUTO IMAGE key/indicator | 29 | Paper feed location/misfeed location indicators | 30 | PRESET RATIO selector keys ( $\vee$, © ${ }^{(1)}$ / indicators |
| 31 | [*] key | 32 | Numeric keys | 33 | READ-END key (\#) |
| 34 | START key (®) /indicators | 35 | CLEAR ALL key (CA) | 36 | CLEAR key ( ${ }_{\text {c }}$ ) |

## 4. Motor, solenoid, clutch

| No. Name | Function operation |  |  |
| :---: | :--- | :---: | :--- |
| 1 | Mirror motor | MRM | Drives the optical mirror base (scanner unit). |
| 2 | Shifter motor | SHTM | Shifts the paper exit tray. |
| 3 | Toner motor | TM | Toner supply |
| 4 | Duplex motor | DPX | Switchback operation and paper exit motor in duplex. |
| 5 | Cooling fan motor | Cools the inside of the machine. |  |
| 6 | Main motor | MM | Drives the machine. |
| 7 | 1st tray paper feed clutch | RRF1 | Drive the pick up roller |
| 8 | PS clutch | Drives the resist roller |  |
| 9 | Paper feed solenoid | RPSOL1 | Solenoid for paper feed from cassette |
| 10 | Resist roller solenoid | Resist roller rotation control solenoid |  |
| 11 | Manual paper transport clutch | MPFC | Drives the manual paper transport roller. |
| 12 | Manual paper feed clutch | MPFS | Manual paper feed solenoid |
| 13 | Manual paper feed solenoid | CPFC2 | Drives the 2nd tray transport roller. |
| 14 | 2nd tray transport clutch | FSOL1 | 2nd tray transport solenoid |
| 15 | 2nd tray transport solenoid | CPFC1 | Drives the 2nd tray paper feed roller. |
| 16 | 2nd tray paper feed clutch | PSOL2 | 2nd tray transport solenoid |
| 17 | 2nd tray paper feed solenoid | VFM | Cools the inside of the machine. |
| 18 | Exhaust fan motor |  |  |

## 5. Sensor, switch

| No. | Name | Code |  |
| :---: | :--- | :---: | :--- |
| 1 | Mirror home position sensor | MHPS | Detects the mirror (scanner unit) home position. |
| 2 | Side door switch | DSWR | Side door open detection |
| 3 | Paper exit sensor (paper exit side) | POD1 | Detects paper exit. |
| 4 | Shifter home position sensor | SFTHP | Shifter home position detection |
| 5 | Paper exit sensor (DUP side) | PDPX | Paper transport detection |
| 6 | Thermistor | RTH | Fusing section temperature detection |
| 7 | Thermostat |  | Fusing section abnormally high temperature detection |
| 8 | Toner density sensor | TCS | Toner quantity detection |
| 9 | 2nd tray detection switch |  | 2nd tray detection |
| 10 | Manual sensor | MPED | Manual transport detection |
| 11 | 2nd tray door open/close sensor | DRS2 | 2nd tray door open/close detection |
| 12 | 2nd tray door paper pass sensor | PPD2 | 2nd tray paper entry detection |
| 13 | 2nd tray paper empty sensor | CSS2 | 2nd tray paper empty detection |
| 14 | Paper in sensor | PIN | Paper transport detection |
| 15 | Cassette empty |  | Tray paper entry detection |
| 16 | Front cover SW |  | Front cover open detection |
| 17 | Power switch | MAIN SW | Turns ON/OFF the main power source. |

## 6. PWB unit

| No. | Name | Function operation |
| :---: | :--- | :--- |
| 1 | Copy lamp Inverter PWB | Copy lamp control |
| 2 | I/ F PWB | USB1.1, IEEE1284 I/F |
| 3 | CCD sensor PWB | Image scanning |
| 4 | Main control PWB | Main control PWB |
| 5 | Tray PWB | Shifter motor control |
| 6 | IMC2 PWB | Electronic sort, USB2.0 << Option:AR-EB7>> |
| 7 | 2nd cassette PWB | 2nd cassette control |
| 8 | High voltage PWB | High voltage control |
| 9 | Power PWB | AC power input/DC power control |
| 10 | Operation main PWB | Operation panel input/Display, operation panel section control |

## 7. Cross sectional view

| No. | Name | Function/Operation |
| :---: | :--- | :--- |
| 1 | Copy lamp | Image radiation lamp |
| 2 | Copy lamp unit | Operates in synchronization with No. 2/3 mirror unit to radiate documents <br> sequentially. |
| 3 | LSU unit | Converts image signals into laser beams to write on the drum. |
| 4 | Lens unit | Reads images with the lens and the CCD. |
| 5 | MC holder unit | Supplies negative charges evenly on the drum. |
| 6 | Paper exit roller | Used to discharge paper. |
| 7 | Transport roller | Used to transport paper. |
| 8 | Upper heat roller | Fuses toner on paper (with the teflon roller). |
| 9 | Lower heat roller | Fuses toner on paper (with the silicon rubber roller). |
| 10 | Waste toner transport roller | Transports waste toner to the waste toner box. |
| 11 | Drum unit | Forms images. |
| 12 | Transfer charger unit | Transfer images (on the drum) onto paper. |
| 13 | DUP follower roller |  |
| 14 | Duplex transport roller | Transports paper for duplex . |
| 15 | Resist roller | Takes synchronization between the paper lead edge and the image lead edge. |
| 16 | Manual paper feed tray | Manual paper feed tray |
| 17 | Manual paper pick up roller | Picks up paper in manual paper feed. |
| 18 | No. 2/3 mirror unit | Reflects the images from the copy lamp unit to the lens unit. |
| 19 | Manual transport roller | Transports paper from the manual paper feed port. |
| 20 | 2nd tray paper transport roller | Transports paper from the 2nd tray. |
| 21 | 2nd tray paper pick up roller <br> (semi-circular roller) | Picks up paper from the 2nd tray. |
| 22 | 1st tray paper feed roller <br> (semi-circular roller) | Picks up paper from the 1st tray. |
| 23 | MG roller | Puts toner on the OPC drum. |

## [5]UNPACKING AND INSTALLATION

## 1.Installing conditions

## A.Copier installation

Do not install your copier in areas that are: -damp, humid, or very dusty - exposed to direct sunlight -poorly ventilated -subject to extreme temperature or humidity changes, e.g., near an air conditioner or heater.
-Be sure to allow the required space around the machine for servicing and proper ventilation.

## B.Power source

-Use an exclusive-use power outlet. If the power plug of this machine is inserted into a power outlet commonly used with other illumination units, flickers of the lamp may be result. Use a power outlet which is not used commonly with any illumination units.
-Avoid complex wiring.

## C.Grounding wire connection.

-To avoid danger, be sure to connect a grounding wire. If no grounding wire is connected and a leakage occurs, a fire or an electric shock may be result.

## 2.Removal of protective material and fixing screw

1) Remove all tapes and protective material.
-Remove all tapes, then open the document cover and remove the protective material of sheet shape
2) Remove the fixing screw.
-Use a coin to remove the fixing screw.
-The fixing screw is required when transporting the machine. Keep it in the tray. (Refer to the later description.)

## 3.Installing procedure

## A.Developer cartridge installation

1) Open the manual tray, and open the side cover.
2) Open the front cover.
-Hold the both sides and pull down to open.

3) Loosen the screw and remove the developer cartridge.

4) Remove the developer tank from the developer cartridge.

5) Supply developer into the developer tank while rotating the MG roller in the arrow direction.

* Shake the developer bag enough before opening it.

Note: Check that the DV seal is free from developing agent. If developing agent is attached to the DV seal, clean it carefully. Check to insure that the hook is engaged in two positions.
6) Attach the developer tank to the developer cartridge.

* After supplying developer into the developer cartridge, do not tilt or shake the developer cartridge.

7) Attach the developer cartridge to the copier, and fix it with the screw.

## B.Toner cartridge installation

1) Shake the toner cartridge several times horizontally, and remove the tape.

* Do not hold the shutter lever when shaking.
* After removing the tape, do not tilt or shake the toner cartridge.

2) Attach the toner cartridge to the copier.

3) Pull the shutter lever.

Close the front cover $A$, then close the side cover $B$.
-When closing the front cover, gently press the both sides.
-When closing the side cover, hold the knob.
-When closing the covers, be sure to close the front cover first, then close the side cover. If closed in a wrong sequence, the covers may be broken.

## 4.Removal and storage of fixing screw

1) Lift the knob and gently pull out the tray.

2) Hold the paper pressure plate and turn the fixing screw in the arrow direction.

3) Store the fixing pin and the fixing screw in the tray.
-Store the fixing screw which was removed in the above procedure 2 and the fixing screw which was removed in procedure 2 of 2.
-Removal of protective material and fixing screw in the storage place in the tray.

## 5. Changing the copy paper size in the tray

Note
-The paper size setting cannot be changed when the machine has stopped temporarily due to running out of paper or a misfeed, or during interrupt copying.
-During printing (even in copy mode), the paper size setting cannot be changed.
-5-1/2" x 8-1/2" size paper can only be selected in upper paper tray.
-Do not load paper that is a different size than the paper size setting. Copying will not be possible.

1) Hold down the [PAPER SIZE ENTER] key for more than 5 seconds to set the selected paper size.
The currently selected paper feed location indicator will blink and the corresponding paper size (which is currently set) indicator will light steadily.
All other indicators will go out.

2) Use the [TRAY SELECT] key to select the paper tray for which you wish to change the paper size setting.
Each time the [TRAY SELECT] key is pressed, a paper tray will be indicated with a blinking paper feed location indicator.

3) Use the [ORIGINAL SIZE ENTER] key to select the paper size. The indicator of the selected paper size lights up.

4) Squeeze the lock lever of the front guide and slide the front guide to match the width of the paper, and move the left guide to the appropriate slot as marked on the tray.

-The front guide is a slide-type guide. Grasp the locking knob on the guide and slide the guide to the indicator line of the paper to be loaded. -The left guide is an insert-type guide. Remove it and then insert it at the indicator line of the paper to be loaded.
-When using $11^{\prime \prime} \times 17$ " sized paper store the left guide in the slot at the left front of the paper tray.

5) Press the [START] key and then the [PAPER SIZE ENTER] key. To change the paper size setting of another tray, repeat steps 2 to 3 after pressing the [START] key.

Note
Affix the paper size label for the paper size selected in step 3 to the label position on the right end of the tray.

## [6]ADJUSTMENTS

## 1.Adjustment item list

| Section |  | Adjustment item |  | Adjustment procedure/SIM No. |
| :---: | :---: | :---: | :---: | :---: |
| A | Process section | (1) | Developing doctor gap adjustment | Developing doctor gap adjustment |
|  |  | (2) | MG roller main pole position adjustment | MG roller main pole position adjustment |
|  |  | (3) | Developing bias voltage check |  |
|  |  | (4) | Main charger voltage check |  |
| B | Mechanism section | (1) | Image position adjustment | SIM-50 |
|  |  | (2) | Main scanning direction (FR direction) distortion balance adjustment | No. 2/3 mirror base unit installing position adjustment |
|  |  |  |  | Copy lamp unit installing position adjustment |
|  |  | (3) | Main scanning direction (FR direction) distortion adjustment | Rail height adjustment |
|  |  | (4) | Sub scanning direction (scanning direction) distortion adjustment | Winding pulley position adjustment |
|  |  | (5) | Main scanning direction (FR direction) magnification ratio adjustment | SIM 48-1 |
|  |  | (6) | Sub scanning direction (scanning direction) magnification ratio | OC mode in copying (SIM 48-1) |
|  |  |  | adjustment | SPF mode in copying (SIM 48-5) |
|  |  | (7) | Off center adjustment | OC mode (SIM 50-12) |
|  |  |  |  | SPF mode (SIM 50-12) |
|  |  | (8) | SPF white correction pixel position adjustment (required in an SPF model when replacing the lens unit) | SIM63-7 |
| C | Image density adjustment | (1) | Copy mode | SIM 46-1 |

## 2.Copier adjustment

## A.Process section

## (1) Developing doctor gap adjustment

1) Loosen the developing doctor fixing screw $A$.
2) Insert a thickness gauge of 1.5 mm to the three positions at 20 mm and 130 mm from the both ends of the developing doctor as shown.

3) Push the developing doctor in the arrow direction, and tighten the developing doctor fixing screw. (Perform the same procedure for the front and the rear frames.)
4) Check the clearance of the developing doctor. If it is within the specified range, then fix the doctor fixing screw with screw lock.

* When inserting a thickness gauge, be careful not to scratch the developing doctor and the MG roller.

## <Adjustment specification>

Developing doctor gap
Both ends ( 20 mm from the both ends) : $1.5_{-0.15}^{+0.1} \mathrm{~mm}$
C (Center) ( 150 mm from the both ends) : $1.55_{-0.2}^{+0.15} \mathrm{~mm}$

## (2) MG roller main pole position adjustment

1) Remove and separate the waste toner box and put the developing unit on a flat surface.
2) Tie a string to a needle or a pin.
3) Hold the string and bring the needle close to the MG roller horizontally. (Do not use paper clip, which is too heavy to make a correct adjustment.) (Put the developing unit horizontally for this adjustment.)
4) Do not bring the needle into contact with the MG roller, but bring it to a position 2 or 3 mm apart from the MG roller. Mark the point on the MG roller which is on the extension line from the needle tip.
5) Measure the distance from the marking position to the top of the doctor plate of the developing unit to insure that it is 18 mm .
If the distance is not within the specified range, loosen the fixing screw A of the main pole adjustment plate, and move the adjustment plate in the arrow direction to adjust.

## (3)Developing bias voltage check

Note:Use a digital multi-meter with an internal resistance of $10 \mathrm{M} \Omega$ or more.

1) Set the digital multi-meter range to DC 700 V .
2) Put the test rod of the digital multi-meter on the developing bias voltage output check pin.
3) Turn on the power, execute SIM25-1.

<Specification>

| Mode | Specification |
| :--- | :--- |
| Developing bias voltage | DC $-400 \pm 8 \mathrm{~V}$ |

## (4) Grid bias voltage check

Note:Use a digital multi-meter with an internal resistance of $10 \mathrm{M} \Omega$ or more.

1) Set the digital multi-meter range to $D C 700 \mathrm{~V}$.
2) Put the test rod of the digital multi-meter on the grid bias voltage output check pin.
3) Turn on the power.
(The voltage is outputted in the grid bias High output mode during warming up, and in the grid bias Low output mode when warming up is completed.)

## <Specification>

| Mode | Specification |
| :--- | :--- |
| Grid bias LOW | DC $-400 \pm 8 \mathrm{~V}$ |
| Grid bias HIGH | DC $-525 \pm 10 \mathrm{~V}$ |

## B.Mechanism section

Note: If a jam error or paper empty occurs during copying in the adjustment by the simulation, the image data are not saved, and therefore recopying is required.

## (1)Image position adjustment

a.OC image lead edge position adjustment (SIM 50-1)

Note: In advance to this adjustment, the sub scanning magnification ratio adjustment must be performed.

1) Set a scale on the OC table as shown below.

2) Make a copy.
3) Check the copy output. If necessary, perform the following adjustment procedures.
4) Execute SIM 50-1.
5) Set the OC lead edge position set value (Exposure display <<PHOTO>> ON) to [1]
The OC image scanning start position is shifted inside the document edge.
6) Set the main cassette lead edge void adjustment value (Exposure display <<TEXT>> ON) * to [1]
The lead edge void becomes the minimum.
7) Set the main cassette print start position value (Exposure display <<AUTO+MAIN CASSETTE LAMP>> ON) to [1] and make a copy. The print start position is shifted inside the document edge.

*The dimension varies depending on the model.
8) Measure the image loss $R$ of the copied image. Enter the set value of the image scanning lead edge position (Exposure display <<PHOTO>> ON) again.
$\cdot 1$ step of the set value corresponds to about 0.1 mm shift.
-Calculate the set value from the formula below.
$R / 0.1(\mathrm{~mm})=$ Image loss set value
$<R$ : Image loss measurement value (mm)>

* The scanning edge is set.
(A line may be printed by scanning the document edge.)
Example: $\quad 4 / 0.1=40=$ about 40
Note: If the set value is not obtained from the above formula, perform the fine adjustment.

9) Measure the distance H between the paper lead edge and the image print start position. Set the image print start position set value (Exposure display <<AUTO+MAIN CASSETTE LAMP>> ON) again.
$\cdot 1$ step of the set value corresponds to about 0.1 mm shift.
-Calculate the set value from the formula below.
$\mathrm{H} / 0.1(\mathrm{~mm})=$ Image print start position set value
<H: Print start position measurement value (mm)>

*Fit the print edge with the paper edge, and perform the lead edge adjustment.
Example: $\quad 5 / 0.1=50=$ about 50
Note:If the set value is not obtained from the above formula, perform the fine adjustment.
10) Set the lead edge void adjustment value (Exposure display <<TEXT>> ON)* again.
$\cdot 1$ step of the set value corresponds to about 0.1 mm shift.
-Calculate the set value from the formula below.
$\mathrm{B} / 0.05(\mathrm{~mm})=$ Lead edge void adjustment value
<B: Lead edge void (mm)>

Example: When setting the lead edge void to 2.5 mm

$$
\text { :2.5 /0.05 = about } 50
$$

Note:If the set value is not obtained from the above formula, perform the fine adjustment.

* 2nd cassette lead edge void adjustment: Exposure display <<AUTO + TEXT + PHOTO>>
Multi bypass tray lead edge void adjustment: Exposure display <<TEXT + PHOTO>>

## <Duplex mode adjustment>

OC 2nd print surface (Auto duplex) lead edge position adjustment: SIM50-19 <<PHOTO>>

* For the adjustment procedure, set to $\mathrm{S} \rightarrow \mathrm{D}$ mode before execution.

Note:Before performing the 2nd print surface lead edge position adjustment and the lead edge void adjustment, be sure to perform the 1st print surface lead edge position adjustment in advance, and be sure to perform the 2nd print surface lead edge position adjustment and then the lead edge void adjustment in this sequence.
<Adjustment specification>

| Adjustment mode | SIM | LED | Set value | Spec value | $\begin{gathered} \text { Set } \\ \text { range } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| OC image lead edge position | $\begin{gathered} \text { SIM } \\ 50-1 \end{gathered}$ | PHOTO | R/0.1 | Lead edge <br> void: <br> 1-4mm <br> Image loss: <br> 3 mm or less | $1 \sim 99$ |
| Main cassette print start position |  | $\begin{gathered} \text { AUTO } \\ + \\ \text { MAIN } \end{gathered}$ | B/0.1 |  |  |
| 2nd cassette print start position |  | AUTO + 2nd CASSETTE |  |  |  |
| Multi bypass tray print start position |  | $\begin{gathered} \text { AUTO } \\ ++ \\ \text { MULTI } \end{gathered}$ |  |  |  |
| Lead edge void |  | TEXT | B/0.05 |  |  |
| OC 2nd print surface lead edge position adjustment | $\begin{array}{\|c\|} \hline \text { SIM } \\ 50-19^{*} \end{array}$ | PHOTO | $\begin{array}{\|l\|} \hline 1 \text { step: } \\ 0.1 \mathrm{~mm} \text { shift } \end{array}$ |  |  |

* (Set to $S \rightarrow$ D mode for before execution)

## b.SPF image lead edge position adjustment (SIM50-6)

1) Set a scale on the OC table as shown below.

Note:Since the printed copy is used as a test chart, put the scale in paralled with the edge lines.
2) Make a copy, Then use the copy output as an original to make an SPF copy again.
3) Check the copy output. If necessary, perform the following adjustment procedures.
4) Execute SIM 50-6.
5) Set the SPF lead edge position set value (Exposure display <<AUTO>> ON) so that the same image is obtained as that obtained in the previous OC image lead edge position adjustment.

## <Adjustment specification>

| Adjustment mode | SIM | LED | Set value | Spec value | $\begin{array}{r} \text { Set } \\ \text { range } \end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| SPF image lead edge position (1st print surface) | $\begin{gathered} \mathrm{SIM} \\ 50-6 \end{gathered}$ | AUTO | 1 step:0.1 mm shift | Lead edge void: <br> 1-4mm <br> Image loss: <br> 3 mm or less | 1~99 |
| (2nd print surface) |  | TEXT |  |  |  |

c.Rear edge void adjustment (SIM50-1, SIM50-19)

1) Set a scale as shown in the figure below.

2) Set the document size to $A 4$ ( $8.5^{\prime \prime} \times 11^{\prime \prime}$ ), and make a copy at $100 \%$.
3) If necessary, perform the following adjustment procedure.

4) Execute SIM 50-1 and set the density mode to AUTO + TEXT + PHOTO (Rear edge void).The currently set adjustment value is displayed.
5) Enter the set value and press the start key. The correction value is stored and a copy is made.

## <Duplex mode adjustment>

* 1st print surface (auto duplex) rear edge void adjustment: SIM50-19 <<AUTO>>
* 2nd print surface (auto duplex) rear edge void adjustment: SIM50-19<<TEXT>>
* Set to $\mathrm{S} \rightarrow \mathrm{D}$ mode before execution.

Note:Before performing the 2nd print surface rear edge void adjustment, be sure to perform the 2 nd print surface lead edge position adjustment. Never reverse the sequence.
<Adjustment specification>

| Mode | SIM | LED | Set value | Specifi- <br> cation | Set <br> range |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Rear edge void | SIM <br> $50-1$ | AUTO <br> + <br> TEXT <br> + | 1 step: <br> 0.1 mm shift | 4 mm or <br> less | $1 \sim 99$ |
| 1st print <br> surface rear <br> edge void | SIM <br> $50-19^{*}$ | AUTO |  |  |  |
| 2nd print <br> surface rear <br> edge void | SIM <br> $50-19^{*}$ | TEXT |  |  |  |

* Set to $S \rightarrow D$ mode before execution

## d. Paper off center adjustment (SIM50-10)

1) Set a test chart (UKOG-0089CSZZ) on the document table.
2) Select a paper feed port and make a copy. Compare the copy and the test chart. If necessary, perform the following adjustment procedure.
3) Execute SIM 50-10. After completion of warm-up, shading is performed and the currently set off center adjustment value of each paper feed port is displayed.
4) Enter the set value and press the start key. The correction value is stored and a copy is made.

## <Duplex mode adjustment>

* 2nd print surface (auto duplex) off-center adjustment: SIM50-10<<TEXT+MAIN CASSETTE>>
<Adjustment specification>

| Mode | SIM | LED | Set value | Specification | $\begin{gathered} \text { Set } \\ \text { range } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Paper off center | $\begin{array}{r} \text { SIM } \\ 50-10 \end{array}$ | AUTO + Selected tray ON | Add 1: <br> 0.1 mm shift to $R$ side. | Single: Center $\pm 2.0 \mathrm{~mm}$ | 1 ~ 99 |
| 2nd print surface offcenter | $\begin{array}{r} \text { SIM } \\ 50-10 \end{array}$ | TEXT + MAIN CASSETTE | Reduce 1: 0.1 mm shift to L side. | Duplex: <br> Center <br> $\pm 2.5 \mathrm{~mm}$ |  |

## e.Side edge void area adjustment (SIM26-43)

Note:Before performing this adjustment, be sure to check that the paper off center adjustment (SIM 50-10) is completed.

1) Set a test chart (UKOG-0089CSZZ) on the document table.
2) Select a paper feed port and make two copies. Compare the 2nd copy and the test chart. If necessary, perform the following adjustment procedure.

* The 1st copy does not show the void. Be sure to check the 2nd copy.

3) Execute SIM 26-43 and set the density mode to AUTO(right edge void) + TEXT (Left edge void).
The currently set adjustment value is displayed.
4) Enter the set value and press the start key. The correction value is stored.

## <Adjustment specification>

| ode | SIM | LED | Set value | Specifi- <br> cation | Set <br> range |
| :---: | :---: | :---: | :--- | :---: | :---: |
| Left edge void | SIM <br> $26-43$ | AUTO <br> (right <br> edge) <br> + <br> + <br> TEXT <br> (left edge) | 1 step: <br> 0.5 mm shift | $0.5 \sim 4 \mathrm{~mm}$ | $1 \sim 99$ |
|  |  |  |  |  |  |

* The void adjustment values on the right and the left must be the same.
(2) Main scanning direction(FR direction) distortion balance adjustment

1) Remove the OC glass and the right cabinet.
2) Loosen the copy lamp unit wire fixing screw.

3) Manually turn the mirror base drive pulley and bring No. $2 / 3$ mirror base unit into contact with the positioning plate. At that time, if the front frame side and the rear frame side of No. $2 / 3$ mirror base unit are brought into contact with the positioning plate at the same time, the mirror base unit parallelism is proper. If one of them is in contact with the positioning plate, perform the adjustment of 4).

4) Loosen the set screw of the scanner drive pulley which is not in contact with No. $2 / 3$ mirror base unit positioning plate.
5) Without moving the scanner drive pulley shaft, manually turn the scanner drive pulley until the positioning plate is brought into contact with No. 2/3 mirror base unit, then fix the scanner drive pulley.

6) Put No. 2/3 mirror base unit on the positioning plate again, push the projections on the front frame side and the rear frame side of the copy lamp unit to the corner frame, and tighten the wire fixing screw.

## (3)Main scanning direction (FR direction) distortion adjustment

This adjustment must be performed in the following cases: -When the mirror base drive wire is replaced.
-When the lamp unit, or No. $2 / 3$ mirror holder is replaced.
-When a copy as shown is made.

1) Set A3 (11" $x$ 17") white paper on the original table as shown below.

2) Open the original cover and make a normal ( $100 \%$ ) copy.
3) Measure the width of the black background at the lead edge and at the rear edge.

La: Lead edge black background width Lb: Rear edge black background width

If the width (La) of the black background at the lead edge is equal that (Lb) at the rear edge, there is no need to execute the following procedures of 4) ~ 7).
4) Loosen the mirror base drive pulley fixing screw on the front frame side or on the rear frame side.

```
- When La < Lb
    Turn the mirror base drive pulley on the front frame side in the
    arrow direction A .
    (Do not move the mirror base drive pulley shaft.)
- When La > Lb
    Turn the mirror base drive pulley on the front frame side in the
    arrow direction A .
    (Do not move the mirror base drive pulley shaft.)
                                    Rear side
Front side
```

5)Tighten the mirror base drive pulley fixing screw.

## <Adjustment specification>

$\mathrm{La}=\mathrm{Lb}$
6) Execute the main scanning direction (FR) distartion balance adjustment previously described in 2 ) again.

## (4) Sub scanning direction (scanning direction) distortion adjustment

When there is no skew copy in the mirror base scanning direction and there is no horizontal error (right angle to the scanning direction), the adjustment can be made by adjusting the No. $2 / 3$ mirror base unit rail height.
Before performing this adjustment, be sure to perform the horizontal image distortion adjustment in the laser scanner section.
This adjustment must be performed in the following cases:
-When the mirror base wire is replaced.
-When the copy lamp unit or No. $2 / 3$ mirror unit is replaced.
-When the mirror unit rail is replaced or moved.
-When a following copy is made.

1) Making of a test sheet

Make test sheet by drawing parallel lines at 10 mm from the both ends of A3 (11" x 17") white paper as shown below. (These lines must be correctly parallel to each other.)

2) Make a normal (100\%) copy of the test sheet on A3 (11" $\times 17$ ") paper. (Fit the paper edge with the glass holding plate edge.)
3) Measure the distances (La, Lb, Lc, Ld) at the four corners as shown below.

When $\mathrm{La}=\mathrm{Lb}$ and $\mathrm{Lc}=\mathrm{Ld}$, no need to perform the procedures 4) and 5).
4) Move the mirror base $F$ rail position up and down (in the arrow direction) to adjust.

Note:If the rear side rail is used for the adjustment, the scanning position of the white balance sheet is shifted and "E7-04" may occur only when scanning with the SPF. Therefore it is advisable to use the front side rail for the adjustment.

- When La > Lb

Shift the mirror base B rail upward by the half of the difference of La - Lb.

- When La < Lb

Shift the mirror base B rail downward by the half of the difference of Lb-La.
Example: When $\mathrm{La}=12 \mathrm{~mm}$ and $\mathrm{Lb}=9 \mathrm{~mm}$, shift the mirror base $B$ rail upward by 1.5 mm .

- When Lc > Ld

Shift the mirror base B rail downward by the half of the difference of Lc - Ld.

- When Lc < Ld

Shift the mirror base B rail downward by the half of the difference of Ld - Lc.

* When moving the mirror base rail, hold the mirror base rail with your hand.

## <Adjustment specification>

$L a=L b, L c=L d$
5) After completion of adjustment, manually turn the mirror base drive pulley, scan the mirror base A and mirror base B fully, and check that the mirror bases are not in contact with each other.

* If the mirror base rail is moved extremely, the mirror base may be in contact with the frame or the original glass. Be careful to avoid this.

## (5) Main scanning direction (FR direction) magnification ratio adjustment (SIM 48-1)

Note:Before performing this adjustment, be sure to check that the CCD unit is properly installed.

1) Put a scale on the original table as shown below.

2) Execute SIM 48-1.
3) After warm-up, shading is performed and the current set value of the main scanning direction magnification ratio is displayed on the display section in 2 digits.
4) Select the mode and press the start key again.
5) Manual correction mode (TEXT lamp ON)

Enter the set value and press the start key. The set value is stored and a copy is made.

## <Adjustment specification>

Note: A judgment must be made with 200 mm width, and must not be made with 100 mm width.

| Mode | Specification | SIM | Set value | Set range |
| :--- | :--- | :--- | :--- | :---: |
| Main scanning | At normal: | SIM 48-1 | Add 1:0.1\% | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ |  | increase <br> Reduce 1: |  |
| magnification |  |  | $0.1 \%$ <br> ratio |  |
|  |  |  |  |  |

## (6) Sub scanning direction (scanning direction) magnification ratio adjustment (SIM 48-1, SIM 48-5)

## a. OC mode in copying (SIM48-1)

Note:Before performing this adjustment, be sure to check that the CCD unit is properly installed.

1) Put a scale on the original table as shown below, and make a normal (100\%) copy.
2) Compare the scale image and the actual image. If necessary, perform the following adjustment procedures.
3) Execute SIM 48-1.<<PHOTO $\gg$
4) After warm-up, shading is performed and the current set value of the main scanning direction magnification ratio is displayed on the display section in 2 digits.
5) When the photo lamp is lighted by pressing the density selection key, the current magnification ratio correction value in the sub scanning direction is displayed in lower 2 digits of the display section.
6) Enter the set value and press the start key.

The set value is stored and a copy is made.
<Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :--- | :--- | :--- | :--- | :---: |
| Sub scanning | Normal | SIM 48-1 | Add 1:0.1\% | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ | (PHOTO) | increase |  |
| magnification |  |  | Reduce 1: <br> ratio |  |
| (OC mode) |  |  | $0.1 \%$ <br> decrease |  |

## b. RSPF sub scanning direction magnification ratio (SIM48-5)

Note:
-Before performing this adjustment, be sure to check that the CCD unit is properly installed.
-Before performing this adjustment, the OC mode adjustment in copying must be completed.

1) Put a scale on the original table as shown below, and make a normal (100\%) copy to make a test chart.

Note: Since the printed copy is used as a test chart, put the scale in parallel with the edge lines.
2) Set the test chart on the SPF and make a normal (100\%) copy.
3) Compare the scale image and the actual image. If necessary, perform the following adjustment procedures.
4) Execute SIM 48-5.
5) After warm-up, shading is performed.

The auto density lamp lights up and the current front surface sub scanning direction magnification ratio correction value is displayed in two digits on the display section.
6) Enter the set value and press the start key.

The set value is stored and a copy is made.
7) Change the mode from the duplex original mode to the simplex original mode.
"MANUAL" lamp lights up and the current back surface sub scanning direction magnification ratio is displayed in two digits on the display section.
8) Enter the set value and press the start key.

The set value is stored and a copy is made.

## <Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :--- | :--- | :--- | :--- | :---: |
| Sub scanning | Normal | SIM 48-5 | Add 1:0.1\% | $1 \sim 99$ |
| direction | $\pm 1.0 \%$ |  | increase <br> Reduce 1: |  |
| magnification |  |  | $0.1 \%$ <br> ratio |  |
| (SPF mode) |  |  |  |  |

## (7) Off center adjustment (SIM 50-12)

## a. OC mode (SIM50-12)

1) Make a test chart as shown below and set it so that its center line is fit with the original guide center mark.

* To make a test chart, draw a line on A3 or $11^{\prime \prime} \times 17^{\prime \prime}$ paper at the center in the paper transport direction.

2) Make a normal copy from the manual paper feed tray, and compare the copy and the test chart.
If necessary, perform the following adjustment procedures.
3) Execute SIM 50-12.
4) After warm-up, shading is performed and the current set value of the off center adjustment is displayed on the display section in 2 digits.
5) Enter the set value and press the start key. The set value is stored and a copy is made.
<Adjustment specification>

| Mode | Specification | SIM | Set value | Set range |
| :---: | :---: | :---: | :---: | :---: |
| Original off center mode (OC mode) | Single: <br> Center $\pm 2.0 \mathrm{~mm}$ | SIM 50-12 <br> (AE lamp ON) | Add 1: <br> 0.1 mm shift <br> to $R$ side <br> Reduce 1: <br> 0.1 mm shift <br> to $L$ side | $1 \sim 99$ |

b. SPF original off-center adjustment (SIM50-12)

Note:Before performing this adjustment, be sure to check that the paper off center is properly adjusted.

1) Make a test chart for the center position adjustment and set it on the SPF.

## <Adjustment specification>

Draw a line on a paper in the scanning direction.
2) Make a normal copy from the manual paper feed tray, and compare the copy and the original test chart. If necessary, perform the following adjustment procedures.
3) Execute SIM 50-12.
4) After warm-up, shading is performed and the current set value of the off center adjustment at each paper feed port is displayed on the display section in 2 digits.
5) Enter the set value and press the start key.

The set value is stored and a copy is made.
<Adjustment specification>

| Mode | Specification | SIM | Set value | $\begin{gathered} \text { Set } \\ \text { range } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Original off center mode (SPF mode) | Single: <br> Center $\pm 3.0 \mathrm{~mm}$ (TEXT lamp) | $\begin{array}{\|c\|} \hline \text { SIM } \\ 50-12 \end{array}$ | Add 1: <br> 0.1 mm shift to $R$ side Reduce 1: 0.1 mm shift to L side | 1~99 |
|  | Duplex: <br> Center $\pm 3.5 \mathrm{~mm}$ (PHOTO lamp) |  |  |  |

(8) SPF white correction pixel position adjustment(SIM63-7) (required in an SPF model when replacing the lens unit)

1) Fully open the SPF.
2) Execute SIM 63-7
3) When the operation panel displays "COMPLETE,"the adjustment is completed.
4) If the operation panel displays "ERROR,"perform the following measures.
-When the display is 0 :
Check that the SPF is open.
Check that the lamp is ON. (If the lamp is OFF,check the MCU connector.) Check that the CCD harness is properly inserted into the MCU connector.
-When the display is 281 or above:
5) Remove the table glass.
6) Remove the dark box.
7) Slide the lens unit toward the front side and attach it,then execute SIM.
-When the display is 143 or below:
8) Remove the table glass.
9) Remove the dark box.
10) Slide the lens unit toward the rear side and attach it,then execute SIM.

* When the lens unit is moved,execute the OC main scanning magnification ratio auto adjustment,SIM 48-1-1,IM48-3 and the PF original off-center adjustment.
* This adjustment is basically O.K.with IM 63-7.

## C.Image density adjustment

(1)Copy mode (SIM 46-1)
1)Set a test chart (UKOG-0162FCZZ) on the OC table as shown below.

2) Put several sheets of $A 3$ or $11^{\prime \prime} \times 17$ " white paper on the test chart.
3) Execute SIM 46-1.
4) After warm-up, shading is performed and the current set value of the density level is displayed on the display section in 2 digits For mode selection, use the density select key.
5) Change the set value with the 10-key to adjust the copy image density.
6) Make a copy and check that the specification below is satisfied.

## <Adjustment specification>

| Density <br> mode | Display <br> lamp | Exposure <br> level | Sharp Gray <br> Chart output | Set value | Set <br> range |
| :--- | :---: | :---: | :--- | :--- | :---: |
| Auto | Auto | - | "2" is slightly <br> copied. | The greater the <br> set value is the | $1 \sim 99$ |
| Text | Text | 3 | "3" is slightly <br> copied. | greater the <br> density is The <br> smaller the set <br> value is the <br> smaller the <br> density is. |  |
| Photo | Photo | 3 | "2" is slightly <br> copied. | "3" is slightly <br> copied | "2" is slightly <br> copied |
| Toner <br> save | Text/ <br> Photo | 3 |  |  |  |
| Toner <br> save | Auto/ <br> Photo | - |  |  |  |

## [7] SIMULATIONS

## 1. Entering the simulation mode

Perform the following procedure to enter the simulation mode.
"\#" key $\rightarrow$ Interrupt key $\rightarrow$ "C" key $\rightarrow$ Interrupt key $\rightarrow$
Main code $\rightarrow$ Start key $\rightarrow$ Sub code $\rightarrow$ Start key

## 2. Canceling the simulation mode

When the clear all key is pressed, the simulation mode is cancelled. When the interruption key is pressed, the process is interrupted and the screen returns to the sub code entering display.

* After canceling the simulation mode, be sure to turn OFF/ON the power and check the operation.
Note: If the machine is terminated by a jam error or paper empty during copying in the adjustment by the simulation, recopying is required.

## 3. List of simulations

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents |

## 4. Contents of simulations

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Contents | Details of operation |  |
| :---: | :---: | :---: | :---: | :---: |
| 01 | 01 | Mirror scanning operation | When the [START] key is pressed, the home position is checked in the first place, and the mirror base performs A3 full scanning once at the set magnification ratio speed. During this scanning, the set magnification ratio is displayed. The mirror home position sensor status is displayed with the photoconductor cartridge replacement lamp. <br> (The lamp lights up when the mirror is in the home position.) <br> During scanning, the copy lamp lights up. <br> When the [Interrupt] key is pressed, the operation is interrupted to go to the sub code input standby mode. |  |
|  | 02 | Mirror home position sensor (MHPS) status display | Used to monitor the mirror home position sensor. When the sensor is ON, the photoconductor cartridge replacement lamp is lighted. During that time, the display section displays the sub code. When the [Interrupt] key is pressed, the machine goes to the sub code input standby mode. (When the CA key is pressed, the simulation is terminated.) |  |
|  | 06 | Mirror scanning operation aging | When the [START] key is pressed, the mirror base performs A3 full scanning at the set magnification ratio speed. During scanning, the set magnification ratio is displayed. After 3 seconds, the mirror base performs full scanning again. During scanning, the set magnification ratio is displayed. <br> * When the [START] key is pressed again, the ready lamp turns and remains off. <br> The photoconductor cartridge replacement lamp displays the status of the mirror home position sensor. (The lamp lights up when the mirror is in the home position.) <br> During aging, the copy lamp lights up. When the [Interrupt] key is pressed, the operation is interrupted if operating, and the machine goes into the sub code input standby mode. |  |
| 02 | 01 | Single paper feeder (SPF) aging | When the [START] key is pressed, the set magnification ratio is acquired and document transport operation of single surface is performed in the case of SPF or document transport operation of duplex surfaces is performed in the case of RSPF. Since, however, there is no limited condition for this operation, it does not stop even at a paper jam. During operation, the LED on the display section corresponding to the selected magnification ratio lights up, and the magnification ratio is displayed on the 7 -seg display. When the [Interrupt] key is pressed at that time, the machine goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated. <br> <Conditions for executing this simulation> <br> Set paper on the SPF and fix it with tape. If paper is not fixed, the operations cannot be guaranteed. |  |
|  | 02 | SPF sensor status display | (In order to receive the sensor change notification, the load must be decreased.) The sensor status (ON/OFF) in the SPF can be checked with the following lamps. When a sensor detects paper, it turns on. The open/close detection sensor turns on when the machine is opened. |  |
|  |  |  | Display lamp | Sensor |
|  |  |  | Developing cartridge replacement lamp <br> Copier jam lamp <br> Photoconductor cartridge replacement lamp <br> Paper empty lamp <br> SPF jam lamp <br> Manual paper feed lamp <br> Tray jam lamp <br> AE lamp <br> TEXT lamp <br> PHOTO lamp | SPF document set sensor <br> SPF document transport sensor <br> SPF unit (OC cover) open/close sensor <br> SPF paper exit sensor <br> SPF paper feed cover open/close sensor <br> SPF paper length sensor 1 <br> SPF paper length sensor 2 <br> SPF paper feed width sensor (small) <br> SPF paper feed width sensor (middle) <br> SPF paper feed width sensor (large) |

When the [Interrupt] key is pressed, the machine goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated.
When the [START] key is pressed, the motor rotates for 10 sec at the speed corresponding to the set magnification ratio. When the [Interrupt] key is pressed, the machine stops operation and goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated.
The SPF paper feed solenoid (PSOL) is turned ON for 500 msec and OFF for 500 msec . This operation is repeated 20 times.
After completion of the process, the machine goes to the sub code input standby mode. When the [Interrupt] key is pressed during the process, the machine goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated.
The RSPF reverse solenoid (PSOL) is turned ON for 500 msec and OFF for 500 msec . This operation is repeated 20 times.
After completion of the process, the machine goes to the sub code input standby mode.
When the [Interrupt] key is pressed during the process, the machine goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated
The RSPF paper exit gate solenoid (GSOL) is turned ON for 500 msec and OFF for 500 msec .
This operation is repeated 20 times.
After completion of the process, the machine goes to the sub code input standby mode.
When the [Interrupt] key is pressed during the process, the machine goes to the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated

| $\begin{array}{\|l} \text { Main } \\ \text { code } \end{array}$ | $\begin{array}{\|l\|} \hline \text { Sub } \\ \text { code } \end{array}$ | Contents | Details of operation |  |
| :---: | :---: | :---: | :---: | :---: |
| 06 | 01 | Paper feed solenoid operation check | When this simulation is executed, the sub code is displayed on the 7 -seg LED and the lamp corresponding to the solenoid lights up. <br> Select a solenoid with the tray select key (the lamp corresponding to the solenoid lights up) and press the [START] key, and the machine repeats operation of ON for 500 ms and OFF for 500 ms . This operation is repeated 20 times. <br> After that, the machine goes into the sub code entry standby mode. |  |
|  |  |  | Display lamp | Solenoid |
|  |  |  | Main cassette lamp <br> 2nd cassette lamp <br> 3rd cassette lamp <br> 4th cassette lamp <br> Manual paper feed lamp <br> 2nd cassette jam lamp <br> Machine jam lamp \& 2nd cassette jam lamp | Main cassette paper feed solenoid <br> * 2nd cassette paper feed solenoid <br> * 3rd cassette paper feed solenoid <br> * 4th cassette paper feed solenoid <br> Manual paper feed solenoid <br> * 2nd cassette paper transport solenoid <br> * 3rd cassette transport solenoid |
|  |  |  | * Supported for the installed models only. Skipped for the models without installation. |  |
|  | 02 | Resist roller solenoid operation check | When the [START] key is pressed in the sub code input state, the resist solenoid (RRS) turns ON for 500 ms and OFF for 500 ms . This operation is repeated 20 times. <br> After completion of the process, the machine goes into the sub code input standby mode. |  |
|  | 10 | Main cassette semicircular roller cleaning | The main motor is rotated to rotate the semicircular roller of the main cassette one turn to face the semicircular roller down. (Remove the developing layer when performing this operation.) During this process, the sub code is displayed on the display section. After completion of the process, the machine goes into the sub code input standby mode. |  |
| 07 | 01 | Warm-up display and aging with jam | Copying is repeated to make the set copy quantity. When this simulation is executed, warm-up is started and warm-up time is counted up every second from 0 and displayed. After completion of warm-up, warm-up time count is stopped. When the [CA] key is pressed, the ready lamp lights up. After that, when the copy quantity is inputted with keys and the [START] key is pressed, copying is repeated to make the set copy quantity. (Intermittent 0 sec )This simulation is canceled by turning off the power or performing a simulation that executes hardware reset. |  |
|  | 06 | Intermittent aging | Copying is repeated to make the set copy quantity. When this simulation is performed, warm-up is performed and the ready lamp is lighted. Enter the copy quantity with the key and press the [START] key, and copying is repeated to make the set copy quantity, the ready state remains for 3 sec , and copying is repeated again to make the set copy quantity. These operations are repeated. This simulation is canceled by turning off the power or performing a simulation that executes hardware reset. |  |
|  | 08 | Shifting with warm-up display (Shifting similar to pressing the CA key) | When the simulation code is entered, warm-up is started and warm-up time is counted up every second from 0 and displayed. When the [CA] key is pressed during counting up, the display section displays " 0 " and count-up process stops. However, warm-up is continued. After completion of warm-up, counting is stopped. Press the [CA] key to terminate the simulation mode. (This simulation is similar to SIM07-01, but without the aging function.) |  |
| 08 | 01 | Developing bias output | When the [START] key is pressed, the developing bias signal is turned ON for 30 sec . However, to calculate the actual output value is calculated, execute SIM25-01. After completion of the process, the machine goes into the sub code input standby mode |  |
|  | 02 | Main charger output (Grid $=$ HIGH) | When the [START] key is pressed, the main charger output is supplied for 30 sec in the grid voltage HIGH mode. After completion of the process, the machine goes into the sub code input standby mode. |  |
|  | 03 | Main charger output (Grid = LOW) | When the [START] key is pressed, the main charger output is supplied for 30 sec in the grid voltage LOW mode. After completion of the process, the machine goes into the sub code input standby mode. |  |
|  | 06 | Transfer charger output | Select an output mode with the [Mode select] key and press the [START] key. The transfer charger output is delivered for 30 sec in the selected mode. After 30 sec of transfer charger output, the machine goes into the sub code entry standby mode. |  |
|  |  |  | Display lamp | Output mode |

| :---: | :---: | :---: | :---: |
| 09 | 01 | Duplex motor forward rotation check | The duplex motor is driven in forward direction (in the paper exit direction) for 30 sec . During the process, the display section displays the sub code. After completion of the process, the machine goes into the sub code input standby mode. When the [Interrupt] key is pressed, the machine goes into the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated. |
|  | 02 | Duplex motor reverse rotation check | The duplex motor is driven in reverse direction for 30 sec . During the process, the display section displays the sub code. After completion of the process, the machine goes into the sub code input standby mode. When the [Interrupt] key is pressed, the machine goes into the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated. |
|  | 04 | Duplex motor RPM adjustment | When any key input is made, it is displayed on the display section. <br> When the [START] key is pressed, the set code data are acquired and stored in the EEPROM, and the machine goes into the sub code input standby mode. <br> When, however, the [START] key is pressed outside the set range, it is not assured. <br> Set range: 1-13 <br> Default: 4 <br> At that time, when the [Interrupt] key is pressed, the data are not rewritten and the machine goes into the sub code input standby mode. <br> When the [CA] key is pressed, the simulation is terminated without rewriting the data. |
|  | 05 | Duplex motor switchback time adjustment | When any key input is made, it is displayed on the display section. When the [START] key is pressed, the set code data are acquired and stored in the EEPROM, and the machine goes into the sub code input standby mode. <br> Set range: 50~76 <br> Default: 50 <br> (Change quantity $1 \rightarrow 1-2$ phase 3 steps) <br> At that time, when the [Interrupt] key is pressed, the data are not rewritten and the machine goes into the sub code input standby mode. <br> When the [CA] key is pressed, the simulation is terminated without rewriting the data. |
| 10 | - | Toner motor operation | When the [START] key is pressed, the toner motor is driven for 30 sec. After completion of the process, the machine goes into the main code input standby mode. When the [Interrupt] key is pressed, the machine goes into the main code input standby mode. |
| 14 | - | Trouble cancel (except for U2) | * Trouble to write into the EEPROM such as H trouble is canceled and hardware reset is performed. |
| 16 | - | U2 trouble cancel | * U2 trouble is canceled and hardware reset is performed. |
| 20 | 01 | Maintenance counter clear | When the [Start] key is pressed, the maintenance count value is cleared and " 000000 " is displayed. (Alternate display of "000" and "000") |
| 21 | 01 | Maintenance cycle setting |  |
|  | 02 | Mini maintenance cycle setting (Valid only when the destination is set to Japan AB series.) | The current set maintenance cycle code is displayed (initial display), and the set data are stored. |
| 22 | 01 | Maintenance counter display | The maintenance counter value is displayed. |
|  | 02 | Maintenance preset display (Valid only when the destination is set to EX Japan) | The copy quantity corresponding to the code that is set with SIM21-01 is displayed. (For example: 50,000 sheets) |
|  | 03 | Jam memory display | The LED of the latest jam position is lighted. Every time when the magnification ratio display key is pressed, the jam memory data is acquired sequentially from the latest. The jam position is judged by the acquired data and the corresponding LED is lighted. The 7 -seg display indicates the jam number. At that time, " A " is displayed on the upper first digit. When the last one is displayed, the latest one will be displayed again. Max. 30 jams from the latest are stored. When the [Interrupt] key is pressed, the machine goes into the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated. |
|  | 04 | Jam total counter display | The jam total counter value is displayed. |
|  | 05 | Total counter display | The total counter value is displayed. |
|  | 06 | Developing counter display | The developing counter data is acquired and displayed on the 7 -seg display. When the [Interrupt] key is pressed, the machine goes into the sub code input standby mode. When the [CA] key is pressed, the simulation is terminated. |

|  |  |  | AE, Main cassette lamp AE, 2nd cassette lamp AE, 3rd cassette lamp AE, 4th cassette lamp AE, Manual paper feed lamp AE, TEXT, PHOTO lamps AE, TEXT lamps AE, PHOTO lamp TEXT, PHOTO lamps |  | Main cassette paper feed <br> $\star$ 2nd cassette paper feed <br> $\star$ 3rd cassette paper feed <br> $\star$ 4th cassette paper feed <br> Manual paper feed <br> $\star$ RSPF document feed (Front surface) <br> $\star$ RSPF document feed (Back surface) <br> $\star$ RSPF document (A5) paper feed (Back surface) <br> $\star$ Duplex back surface |
|  |  |  | $\star$ Supported for the installed models only. Skipped for the models without installation. |  |  |
| 53 | 08 | SPF scanning position automatic adjustment | Place the black chart so that it covers both the SPF scan glass and the OC glass. Close the OC cover. When this simulation is executed, the current adjustment value is displayed as the initial display. When the [START] key is pressed, the mirror unit scans from the home position to the SPF scan position with the current adjustment value displayed, and the SPF glass cover edge is calculated from the difference between the SPF glass cover edge and the OC side document glass CCD output level. <br> The default is 50 , the adjustment range is $1 \sim 99$, and the adjustment unit $1=$ about 0.127 mm . If the adjustment is completed normally, the adjusted value is displayed. If not, the jam lamp lights up with the current set value displayed. When the [START] key is pressed again with the jam lamp ON, the execution is repeated again. When the [Interrupt] key or the [CA] key is pressed during execution, "- -" is displayed and the operation is canceled. The mirror returns to its home position and the simulation mode is terminated. In the case when the [Interrupt key] is pressed, the machine goes into the sub code input standby mode. In the case when the [CA] key is pressed, all the lamps are turned off. |  |  |

## [8] USER PROGRAMS

The user programs allow the parameters of certain functions to be set, changed, or canceled as desired.

## 1. List of user programs

This copier has the following user programs.

| Program name | $\begin{gathered} \text { Program } \\ \text { No } \end{gathered}$ | Description | Default | Parameters |
| :---: | :---: | :---: | :---: | :---: |
| Auto clear time | 1 | "Auto clear time" automatically returns the copy settings to the initial settings when a certain period of time elapses after a copy is made. This program is used to select the period of time. "Auto clear time" can also be disabled. | 60sec | 1 (OFF) |
|  |  |  |  | 2 (10sec) |
|  |  |  |  | 3 (20sec) |
|  |  |  |  | 4 (60sec) |
|  |  |  |  | 5 (90sec) |
|  |  |  |  | 6 (120sec) |
| Preheat mode | 2 | This function automatically switches the machine to a low power consumption state if the set duration of time elapses without the machine being used when the power is on. <br> The POWER SAVE indicator lights up, however, the keys on the operation panel can be used. Normal operation automatically resumes when a key on the operation panel is pressed, an original is placed, a print job is received, or scanning is begun from a computer. | 1 min | 1 (1min) |
|  |  |  |  | 2 (5min) |
|  |  |  |  | 3 (30min) |
|  |  |  |  | 4 (60min) |
|  |  |  |  | 5 (120min) |
|  |  |  |  | 6 (240min) |
| Auto power shut-off timer | 3 | This function automatically switches the machine to a state that consumes even less power than preheat mode if the set duration of time elapses without the machine being used when the power is on. All lights except the POWER SAVE indicator and ON LINE indicator go off. To resume normal operation, press the [START] key ( (2)). Normal operation also resumes automatically when a print job is received or scanning is begun from a computer. While in auto power shut-off mode, no keys (except the [START] key (유)) can be used. | 5 min | 1 (5min) |
|  |  |  |  | 2 (30min) |
|  |  |  |  | 3 (60min) |
|  |  |  |  | 4 (120min) |
|  |  |  |  | 5 (240min) |
| Stream feeding mode*1 | 4 | When copying using the SPF/RSPF, during the period of time that the SPF/RSPF indicator blinks after an original has been scanned (about 5 seconds), a subsequent original can be placed and automatically fed into the machine. |  | 0 (OFF) |
|  |  |  | OFF | 1 (ON) |
| Auto power shut-off setting | 5 | Use this setting to enable or disable auto power shut-off. | ON | 0 (OFF) |
|  |  |  |  | 1 (ON) |
| Border line for 2 IN $1 / 4$ IN 1*2 | 6 | When copying multiple originals onto a single sheet of paper (2 IN 1 / 4 IN 1 copy), this function can be used to print a solid or broken borderline around each original image. | OFF | 1 (OFF) |
|  |  |  |  | 2 (Solid line) |
|  |  |  |  | 3 (Broken line) |
| Rotation copy*2 | 7 | When the auto paper select function is enabled and there is no paper that is the same size as the original and loaded in the same orientation, this function will automatically select paper of the same size that is loaded in the opposite orientation, and rotate the image 90 degrees so that it is copied on the paper in the correct orientation. <br> When the auto ratio select function is operating and the original and paper are loaded in opposite orientations, this function rotates the image so that it is copied on the paper in the correct orientation. | ON | 0 (OFF) |
|  |  |  |  | 1 (ON) |
| Auto paper select mode | 8 | This function automatically selects paper that is the same size as the original placed in the SPF/RSPF, or the same size as that selected with the [ORIGINAL SIZE ENTER] key (only for sizes 5-1/ $2^{\prime \prime} \times 8-1 / 2^{\prime \prime}, 8-1 / 2^{\prime \prime} \times 11^{\prime \prime}, 8-1 / 2^{\prime \prime} \times 11 " R, 8-1 / 2^{\prime \prime} \times 14^{\prime \prime}$ and 11 " x 14 "). The function can be disabled. | ON | 0 (OFF) |
|  |  |  |  | 1 (ON) |
| Auto tray switching | 9 | If the paper runs out during printing and there is paper of the same size and orientation in another tray, this function automatically switches to that tray (excluding the bypass tray). The function can be disabled. | ON | 0 (OFF) |
|  |  |  |  | 1 (ON) |
| Auditing mode | 10 to15 | See "Enabling Audit Mode". | - | - |
| Erase width adjustment*2 | 16 | Use this setting to set the width of erasure of shadows that appear around the edges and at the binding margin when a book or similar original is copied. | 1/2" (10mm) | 1 (0" (0mm)) |
|  |  |  |  | 2 (1/4" (5mm)) |
|  |  |  |  | 3 (1/2" (10mm)) |
|  |  |  |  | 4 (3/4" (15mm)) |
|  |  |  |  | 5 (1" (20mm)) |

[^0]| Program name | Program No | Description | Default | Parameters |
| :---: | :---: | :---: | :---: | :---: |
| Layout in 2 IN 1 copy*2 | 17 | Use this setting to select the layout pattern when two original pages are copied onto a single sheet of paper. | Pattern 1 | $\begin{array}{\|l\|} \hline 1 \text { (Pattern 1) } \\ \hline 2 \text { (Pattern 2) } \end{array}$ |
| Layout in 4 IN 1 copy*2 | 18 | Use this setting to select the layout pattern when four original pages are copied onto a single sheet of paper. | Pattern 1 | 1 (Pattern 1) <br> 2 (Pattern 2) <br> 3 (Pattern 3) <br> 4 (Pattern 4) |
| Offset of paper output tray | 19 | When enabled, this function offsets the position in the output tray of interrupt copy jobs and sets of copies during sort/group copy. | ON | $\begin{array}{\|l\|} \hline 0 \text { (OFF) } \\ \hline 1 \text { (ON) } \end{array}$ |
| Image rotation in duplex copying*3 | 20 | When a one-sided portrait original is placed in a horizontal orientation ( $8-1 / 2^{\prime \prime} \times 11^{\prime \prime}$ or $8-1 / 2^{\prime \prime} \times 14^{\prime \prime}$ size) for two-sided copying, the top and bottom of the images on the front and back of the paper will be opposite to each other, | OFF | $\begin{aligned} & \hline 0 \text { (OFF) } \\ & \hline 1 \text { (ON) } \end{aligned}$ |
| Location of the margin*2,*3 | 21 | Use this setting to switch between the margin at the top edge and the margin at the left edge. | Left edge | $\begin{array}{\|l\|} \hline 1 \text { (Left edge) } \\ \hline 2 \text { (Top edge) } \\ \hline \end{array}$ |
| Margin width*2 | 22 | Use this setting to set the margin width. | 1/2" (10mm) | 1 (0" (0mm)) <br> $2\left(1 / 4^{\prime \prime}(5 \mathrm{~mm})\right)$ <br> 3 (1/2" (10mm)) <br> 4 (3/4" (15mm)) <br> 5 (1" (20mm)) |
| Resolution in Auto/Text mode | 23 | The copy resolution in auto and text mode is normally 300 dpi. If high-quality copies are preferred, use this setting to change the resolution to 600 dpi . | 300dpi | $\begin{array}{\|l\|} \hline 1 \text { (300dpi) } \\ \hline 2 \text { (600dpi) } \\ \hline \end{array}$ |
| Memory allocated to printer mode*2 | 24 | Use this to change the proportion of IMC memory used for printer mode. | 50\% | $\begin{array}{\|l\|} \hline 1 \text { (30\%) } \\ \hline 2 \text { (40\%) } \\ \hline 3 \text { (50\%) } \\ \hline 4 \text { (60\%) } \\ \hline 5 \text { (70\%) } \\ \hline \end{array}$ |
| Key auto repeat | 25 | Use this setting to select whether or not holding down a key causes repeated input of the key. For keys that normally cause a set value to increase when held down (for example, holding down the [ZOOM] key $(\Theta),()$ ), this program can be used to have the set value not change when the key is held down. | ON | $\begin{array}{\|l\|} \hline 0 \text { (OFF) } \\ \hline 1 \text { (ON) } \end{array}$ |
| Key press time | 26 | Use this setting to select how long a key must be pressed for the input to be accepted. By selecting a longer time, you can prevent settings from being changed by the accidental pressing of a key. | Minimum (current response speed) | 1 (Minimum <br> (current response speed))$\|$$2(0.5 \mathrm{sec})$ <br> $3(1.0 \mathrm{sec})$ <br> $4(1.5 \mathrm{sec})$ <br> $5(2.0 \mathrm{sec})$ <br> 1 |
| Audible signals volume | 27 | This sets the volume of beep signals. | Low (current volume) | 1 (Low (current volume)) <br> 2 (High) <br> 3 (OFF) |
| Base setting beep signal | 28 | Use this to sound a beep when a base setting is selected. | OFF | $\begin{array}{\|l\|} \hline 0 \text { (OFF) } \\ \hline 1 \text { (ON) } \end{array}$ |
| Number of copies limit | 29 | Use this setting to select 99 or 999 for the maximum number of copies. | 999 copies | $\begin{array}{\|l} \hline 1 \text { (99 copies) } \\ \hline 2 \text { (999 copies) } \\ \hline \end{array}$ |

*2 On models with a dual function board.
*3 On models with automatic two-sided copying.

| Program name | $\begin{aligned} & \text { Program } \\ & \text { No } \end{aligned}$ | Description | Default | Parameters |
| :---: | :---: | :---: | :---: | :---: |
| Use close paper size | 30 | When this function is enabled, printing in printer mode will automatically continue using a different size of paper if the specified size of paper runs out in all trays. This feature does not function in copy mode. | OFF | 0 (OFF) |
|  |  |  |  | 1 (ON) |
| Default tray setting | 31 | Use this program to select a default tray. This tray is automatically selected each time the power is turned on or each time the machine reverts to the initial settings. | Tray 1 | 1 (Tray 1) |
|  |  |  |  | 2 (Tray 2) |
|  |  |  |  | 3 (Tray 3) |
|  |  |  |  | 4 (Tray 4) |
|  |  |  |  | 5 (Bypass tray) |
| Default exposure mode | 32 | Use this program to set "AUTO", "TEXT", or "PHOTO" as the default exposure mode. | AUTO | 1 (AUTO) |
|  |  |  |  | 2 (TEEXT) |
|  |  |  |  | 3 (PHOTO) |
| USB2.0 mode switch | 33 | Used to switch USB2.0 mode between Full-Speed and High-Speed. | Full-Speed | 1(Full-Speed) |
|  |  |  |  | 2(High-Speed) |

## 2. Setting the user programs

1) Hold down the [Light] key (©) until the alarm indicators
 -"- -" appears in the display.

2) Enter the program number with the numeric keys.
-See "USER PROGRAMS" for the program numbers.
-The selected program number blinks.
-To select "Auto clear timer", press the [1] key.

Note:If you enter the wrong number, press the [CLEAR] key (c) and then enter the correct number.
3) Press the [START] key (©).
-The selected program number stops blinking and lights steadily.
-The currently selected setting code blinks in the 1st digit of the display.

4) Enter the desired setting code by pressing a numeric key.
-For the setting codes, see "USER PROGRAMS".
-The selected setting code blinks.
-To select 90 seconds, press the [5] key.

Note:If you enter the wrong number, press the [CLEAR] key (c) and return to step 2).
5) Press the [START] key ( (\$)).
-The selected setting code stops blinking and lights steadily.

Note:To select a setting for another user program, press the [CLEAR] key ( $C$ ) and then return o step 2).
6) Press the [Light] key (©) to complete the settings.
 returns to the number of copies display.

## 3. Toner cartridge life

To find out the approximate quantity of toner remaining, follow the procedure below.

1) Press and hold the light key for more than 5 seconds until all the
 the copy quantity display.

2) Press and hold the copy ratio display key for more than 5 seconds. -The approximate quantity of toner remaining will be indicated as a percent in the copy quantity display. ("100", "75", "50", "25", "10" or "LO" is displayed. When "LO" is displayed, the toner is down to less than 10\%.)

3) Press the light key.
-All the alarm indicators will go out.

## [9]TROUBLE CODE LIST

## 1.Trouble code list

| Main code | $\begin{aligned} & \text { Sub } \\ & \text { code } \end{aligned}$ | Content |

| CH Blink | None | Developing cartridge not installed |

## 2.Details of trouble codes

| Main code | Sub code |  | Details of trouble |
| :---: | :---: | :---: | :---: |
| E1 | 00 | Content | IMC PWB communication trouble |
|  |  | Detail | An abnormality occurs in communication between the MCU PWB and the IMC PWB. |
|  |  | Cause | IMC PWB-MCU PWB harness abnormality MCU PWB connector disconnection IMC PWB ROM defect/data abnormality |
|  |  | Check and remedy | Check connection of the connector and the harness between the IMC PWB and the MCU PWB. <br> Check the ROM of the IMC PWB. |
|  | 10 | Content | IMC PWB trouble |
|  |  | Detail | An abnormality occurs in the IMC PWB. |
|  |  | Cause | USB chip error/CODEC error on the IMC PWB |
|  |  | Check and remedy | Replace the IMC PWB with a new one. |
|  | 11 | Content | IMC ASIC error |
|  |  | Detail | An abnormality occurs in the IMC PWB. |
|  |  | Cause | Abnormality in ASIC on the IMC PWB |
|  |  | Check and remedy | Replace the IMC PWB with a new one. |
|  | 13 | Content | IMC PWB flash ROM error |
|  |  | Detail | An abnormality occurs in the IMC flash ROM. |
|  |  | Cause | IMC PWB abnormality |
|  |  | Check and remedy | Replace the IMC PWB with a new one. If downloading of the program is abnormally terminated, it may cause an error. Download the program again to avoid this. |
|  | 16 | Content | IMC PWB DIMM memory read/write check error |
|  |  | Detail | An installation error occurs in the IMC expansion compression memory module. An error occurs during access to the IMC expansion compression memory. |
|  |  | Cause | Improper installation of the IMC expansion memory module. <br> IMC expansion memory module abnormality IMC expansion memory contact abnormality IMC PWB abnormality. |
|  |  | Check and remedy | Check installation of the expansion memory module. <br> Replace the expansion memory module. Replace the IMC PWB with a new one. |
|  | 81 | Content | Interface error (Parity) in communication with the IMC PWB |
|  |  | Detail | A parity error occurs in communication between the MCU PWB and the IMC PWB. |
|  |  | Cause | IMC PWB-MCU PWB harness defect Improper connection of the MCU PWB connector IMC PWB ROM defect/data abnormality" |
|  |  | Check and remedy | Check connection of the connector/harness between the IMC PWB and the MCU PWB. Check the ROM of the IMC PWB. |

| Main code | $\begin{array}{\|c\|} \hline \text { Sub } \\ \text { code } \end{array}$ |  | Details of trouble |
| :---: | :---: | :---: | :---: |
| E1 | 82 | Content | Interface error (Overrun) in communication with the IMC PWB |
|  |  | Detail | An overrun error occurs in communication between the MCU PWB and the IMC PWB. |
|  |  | Cause | IMC PWB-MCU PWB harness defect Improper connection of the MCU PWB connector IMC PWB ROM defect/data abnormality. |
|  |  | Check and remedy | Check connection of the connector/harness between the IMC PWB and the MCU PWB. Check the ROM of the IMC PWB. |
|  | 84 | Content | Interface error (Framing) in communication with the IMC PWB |
|  |  | Detail | A framing error occurs in communication between the MCU PWB and the IMC PWB. |
|  |  | Cause | IMC PWB-MCU PWB harness defect Improper connection of the MCU PWB connector IMC PWB ROM defect/data abnormality. |
|  |  | Check and remedy | Check connection of the connector/harness between the IMC PWB and the MCU PWB. Check the ROM of the IMC PWB. |
| E7 | 01 | Content | Duplex model memory error |
|  |  | Detail | The memory capacity for the duplex model machine is improper. Insufficient memory capacity |
|  |  | Cause | The memory capacity of the MCU PWB is improper. |
|  |  | Check and remedy | Use SIM 26-39 to check that the memory capacity is 32 MB . If it is not 32 MB , replace the MCU PWB with a suitable one. |
|  | 02 | Content | LSU trouble |
|  |  | Detail | The BD signal from the LSU cannot be detected in a certain cycle. (Always OFF or always ON) |
|  |  | Cause | LSU connector or LSU harness defect or disconnection <br> Polygon motor rotation abnormality Laser beams are not generated. MCU PWB abnormality. |
|  |  | Check and remedy | Check connection of the LSU connector. Execute SIM 61-03 to check the LSU operations. <br> Check that the polygon motor rotates normally. Check that the laser emitting diode generates laser beams. <br> Replace the LSU unit. <br> Replace the MCU PWB. |
|  | 10 | Content | Shading trouble (Black correction) |
|  |  | Detail | The CCD black scan level is abnormal when the shading. |
|  |  | Cause | Improper connection of the CCD unit flat cable CCD unit abnormality MCU PWB abnormality. |
|  |  | Check and remedy | Check connection of the CCD unit flat cable. Check the CCD unit." |

| Main <br> code | Sub <br> code |  |

| E7 | 11 | Content | | Shading trouble (White correction) |
| :--- |

| Main | $\begin{gathered} \text { Sub } \\ \text { code } \end{gathered}$ |  | Details of trouble |
| :---: | :---: | :---: | :---: |
| F5 | 02 | Content | Copy lamp lighting abnormality |
|  |  | Detail | The copy lamp does not turn on. |
|  |  | Cause | Copy lamp abnormality Copy lamp harness abnormality CCD PWB harness abnormality. |
|  |  | Check and remedy | Use SIM 5-3 to check the copy lamp operations. <br> When the copy lamp lights up. <br> Check the harness and the connector between the CCD unit and the MCU PWB. <br> When the copy lamp does not light up. <br> Check the harness and the connector between the copy lamp unit and the MCU PWB. <br> Replace the copy lamp unit. <br> Replace the MCU PWB. " |
| H2 | 00 | Content | Thermistor open |
|  |  | Detail | The thermistor is open. The fusing unit is not installed. |
|  |  | Cause | Thermistor abnormality Control PWB abnormality Fusing section connector disconnection The fusing unit is not installed. |
|  |  | Check and remedy | Check the harness and the connector between the thermistor and the PWB. <br> Use SIM 14 to clear the self diagnostic display. |
| H3 | 00 | Content | Heat roller high temperature detection |
|  |  | Detail | The fusing temperature exceeds $240 \mathrm{C}^{\circ}$. |
|  |  | Cause | Thermistor abnormality Control PWB abnormality Fusing section connector disconnection. |
|  |  | Check and remedy | Use SIM 5-02 to check the heater lamp blinking operation. <br> When the lamp blinks normally. <br> Check the thermistor and its harness. <br> Check the thermistor input circuit on the control PWB. <br> When the lamp keeps ON . <br> Check the power PWB and the lamp control circuit on the MCU PWB. <br> Use SIM 14 to clear the self diagnostic display. |

| Main code | $\begin{aligned} & \hline \text { Sub } \\ & \text { code } \end{aligned}$ |  | Details of trouble |
| :---: | :---: | :---: | :---: |
| H4 | 00 | Content | Heat roller low temperature detection |
|  |  | Detail | When the fusing temperature is lower than $150 \mathrm{C}^{\circ}$ after 55 sec from the start of warming up. <br> When the warming up complete temperature is not reached in 30 sec from reaching $150 \mathrm{C}^{\circ}$. When the fusing temperature is lower than $100 \mathrm{C}^{\circ}$ after 20sec from ready start. When the fusing temperature is lower than $145 \mathrm{C}^{\circ}$ when printing." |
|  |  | Cause | Thermistor abnormality Heater lamp abnormality Thermostat abnormality Control PWB abnormality |
|  |  | Check and remedy | Use SIM 5-02 to check the heater lamp blinking operation. <br> When the lamp blinks normally. <br> Check the thermistor and its harness. <br> Check the thermistor input circuit on the control PWB. <br> When the lamp does not light up. <br> Check for disconnection of the heater lamp and the thermostat. Check the interlock switch. Check the power PWB and the lamp control circuit on the MCU PWB. <br> Use SIM 14 to clear the self diagnostic display. |
| L1 | 00 | Content | Scanner feed trouble |
|  |  | Detail | The scanner does not complete feeding in the specified time. |
|  |  | Cause | Mirror unit abnormality The scanner wire is disconnected. The origin detection sensor abnormality Mirror motor harness abnormality |
|  |  | Check and remedy | Use SIM 1-1 to check the mirror reciprocating operations. <br> When the mirror does not feed. <br> Check for disconnection of the scanner wire. Check the harness and the connector between the mirror motor and the MCU PWB. <br> Replace the mirror unit. <br> Replace the MCU PWB. <br> When the mirror does feed. <br> Use SIM 1-2 to check the mirror home position sensor." |
| L3 | 00 | Content | Scanner return trouble |
|  |  | Detail | The scanner does not complete returning in the specified time. <br> The mirror is not in the home position when OC copying is started with the mirror standby in the home position. |
|  |  | Cause | Mirror unit abnormality Scanner wire disconnection Origin detection sensor abnormality Mirror motor harness abnormality |
|  |  | Check and remedy | Use SIM 1-1 to check the mirror reciprocating operations. <br> When the mirror does not return. <br> Check for disconnection of the scanner wire. Check the harness and the connector between the mirror motor and the MCU PWB. <br> Replace the mirror unit. <br> Replace the MCU PWB. <br> When the mirror does feed. <br> Use SIM 1-2 to check the mirror home position sensor. |

| Main <br> code | Sub <br> code |  |
| :---: | :--- | :--- |

## [10] MAINTENANCE

## 1. Maintenance table

X:Check(Clean, adjust, or replace when required.) O:Clean $\mathbf{A}$ :Replace $\triangle$ :Adjust \& :Lubricate

[^1]
## 2. Maintenance display system

| Toner | Life, <br> Remaining <br> quantity <br> check *1 | a. Press and hold the density adjustment LIGHT key for more than 5 sec , and the machine will enter the user program mode. <br> b. Press and hold the "\%" key for more than 5 sec , and the remaining quantity will be displayed on the copy quantity display in one of the following levels: (Remaining quantity display levels: $100 \%, 75 \%, 50 \%, 25 \%, 10 \%, \text { LO) }$ <br> c. Press the density adjustment LIGHT key to cancel. |  |
| :---: | :---: | :---: | :---: |
|  | Remaining quantity | NEAR EMPTY About 10\% | EMPTY |
|  | LED | ON | Flash |
|  | Machine | Operation allowed | Stop |
| Developer | Life | 50K |  |
|  | LED | ON at 50 K of the developer count |  |
|  | Machine | ```Selection is available between Not Stop and Stop by Service Simulation (SIM 26- 37) Setup. (If Stop is selected, the LED will flash and stop at 50K.) Default: Not Stop Clear: SIM 42-1``` |  |
| Maintenance | LED | Selection is available among $50 \mathrm{~K}, 25 \mathrm{~K}$, $10 \mathrm{~K}, 7.5 \mathrm{~K}, 5 \mathrm{~K}$, and free (no lighting) with SIM 21-1. <br> Default: 50K <br> * Clear: SIM 20-1 |  |
|  | Machine | Not stop |  |

*1: Installation of a new toner cartridge allows to display the remaining quantity.

## 3. Note for replacement of consumable parts

## A. Toner cartridge

When a waste toner cartridge is removed from the machine, it must be put in a polyethylene bag to avoid scattering of toner.

## B. DV cartridge

Do not shake or put up the developer cartridge. Otherwise developer may scatter.

## C. DV seal attachment procedure

1) When attaching the DV side Mylar, check the position shown in the figure below and attach it properly.

2) When attaching the DV side sheet, check the position shown in the figure below and attach it properly.
(First of all, attach the DV side Mylar.)

* Be sure to attach the DV side sheet so that the notch is on the outside.

## [11]DISASSEMBLY AND ASSEMBLY

WARNING Before performing the disassembly procedure, be sure to remove the power cord to prevent against an electric shock.

| No. | Item |
| :---: | :--- |
| 1 | High voltage section/Duplex transport section |
| 2 | Optical section |
| 3 | Fusing section |
| 4 | Paper exit section |
| 5 | MCU |
| 6 | Optical frame unit |
| 7 | LSU |
| 8 | Tray paper feed section/Paper transport section |
| 9 | Manual multi paper feed section |
| 10 | Power section |
| 11 | Developing section |
| 12 | Process section |
| 13 | Others |

## 1. High voltage section/Duplex transport section

| No. |  | Content |
| :---: | :--- | :--- |
| A | Transfer charger unit |  |
| B | Charger wire |  |
| C | Duplex transport section |  |

## A.Transfer charger unit

## B.Charger wire

Installation: The spring tip must be between two reference ribs. -The charger wire must be free from twist or bending. -Be sure to put the charger wire in the V groove.

## C.Duplex transport section

## 2.Optical section

Note: When disassembling or assembling the optical unit, be careful not to touch the mirror and the reflector.

| No. | Content |
| :---: | :--- |
| A | Table glass |
| B | Copy lamp unit |
| C | Inverter PWB for copy lamp |
| D | Copy lamp |
| E | Lens unit |
| F | Wire |

## A.Table glass

## B.Copy lamp unit

Disassembly: Be sure to put No. $2 / 3$ mirror unit to the positioning plate (A).

Assembly:

Adjustment: Main scanning direction distortion balance adjustment

## C.Inverter PWB for copy lamp

## D.Copy lamp

## E.Lens unit

Note: Do not remove screws which are not indicated in the figure. If the height of the base plate is changed, it cannot be adjusted in the market.
Note:The CCD/lens unit is factory-adjusted before shipping. Since these adjustments cannot be performed in the market. Never touch the screws other than screw 2) of the CCD/lens unit.

## Lens unit attachment

$<1>$ Attach the lens unit so that the lens unit number on the lens adjustment plate is aligned with the scribe line on the base plate.

|  | CCD adjustment value |
| :--- | :--- |
| +4 scales | $5.0 \sim$ |
| +3 scales | $3.6 \sim 4.9$ |
| +2 scales | $2.2 \sim 3.5$ |
| +1 scale | $0.8 \sim 2.1$ |
| Reference | $-0.6 \sim 0.7$ |
| -1 scale | $-2.0 \sim-0.7$ |
| -2 scales | $-3.4 \sim-2.1$ |
| -3 scales | $-4.8 \sim-3.5$ |
| -4 scales | $\sim-4.9$ |

<2>Make a sample copy at the above position, and measure the magnification ratio.
$<3>$ Change the installing position in the horizontal direction to adjust the magnification ratio.
-When the copy image is longer than the original, shift to the positive (+) direction.
-When the copy image is shorter than the original, shift to the negative (-) direction.

* 1 scale of the scribed line corresponds to $0.34 \%$ of magnification ratio.
* If this adjustment is not satisfactory, make a fine adjustment with SIM 48-2.

## F.Wire

## 3.Fusing section

| No. | Contents |
| :---: | :--- |
| A | Fusing unit |
| B | Thermostat |
| C | Thermistor |
| D | Heater lamp |
| E | Upper heat roller |
| F | Separation pawl |
| G | Lower heat roller |
| H | Separation pawl |

## A.Fusing unit removal

## B.Thermostat

## C.Thermistor

Installation: When installing the thermistor, be sure to face the installing projection (A) toward the installing surface. Check that the thermistor is in contact with the upper heat roller.

## D. Heater lamp

Assembly: Insert the spring (A) into the hole (B) in the fusing frame.

Assembly: Put the paper guide earth spring (A) under the paper guide (B) before fusing

Assembly: Put the fusing harness (A) on the heater lamp (B) as shown in the figure and fix them together. $<$ R $>$ Place the fusing harness inside the rib (C).

## E.Upper heat roller

Disassembly: There are three pawls on the fusing cover. Remove the screws and slide the fusing cover to the right to remove. The heater lamp is fixed on the fusing cover with a screw. Slide the fusing cover to the front and remove the screw, then remove the heater lamp.

## F.Separation pawl

## G.Lower heat roller

Assembly: When installing the paper guide (3) before fusing, fix the paper guide fixing plate with screws temporarily so that the paper guide fixing plate (2) is in contact with the frame bottom under fusing (A). Set the paper guide (3) before fusing to the bottom line of the positioning reference $(B)$, and tighten the screw firmly.

## H.Separation pawl

4.Paper exit section

| No. | Content |

* When removing the paper feed roller, operate the paper feed clutch with SIM 6-1, and keep the paper feed roller down as shown in the figure above for operation.

## [12]FLASH ROM VERSION UP PROCEDURE

## 1.Preparation

Write the download data (the file with the extension dwl) to the main body of AR-M205/M160.

## Necessary files for download

- Maintenance.exe (Maintenance software)
- ProcPegasus.mdl
- ProcPegasus.ini
- ProcPegasus.fmt
- Pegasus.inf
- Usbscan.sys
- Download file:***.dwl

## <Note>

-The Download file(***.dwl ) and the like that are to be downloaded should be copied, in advance, into folders that have a maintenance program.
-When creating a folder for a maintenance tool in the PC, be sure that no lengthy folder name is included in the path.

## (Example)

Incorrect c:\Maintenance Download Tool
Correct c:\Maintenance\Downtool

## 2.Download procedure

1) Main body side:

Executable by performing the Service Simulation No. 49-01 (Flash Rom program-writing mode).
(A word "d" appears on the operation panel to denote the download mode status.)
2) Connect the PC and the main body with the download cable (USB cable).
(Be sure to use a USB cable for connection. USB2.0 of the AR-EB7 is not applicable.)

3) $P C$ side:

Boot the maintenance program. Select the model icon.

4) PC side:

Confirm that the "Simulation Command List" tree is displayed on the maintenance program.
5) PC side:

When the message "the main body has not got started running" is displayed on the lowest area of the figure below after the "maintenance program" is started up, select the "File" and then "Reconnect" in the menu bar.

6) PC side:

Confirm a tree is displayed under the "Special (MCU/IMC2/FAX)" on the maintenance program". (If no tree is displayed, confirm that the USB is connected and select the "Reconnect" (the above 5) again.)

| 模 Integration Maintenance Program |  | - |
| :---: | :---: | :---: |
| File(E) Option(0) Help(H) |  |  |
| Simlalion Command List |  |  |

7) PC side:

Double click "Special (MCU/MCU2/FAX)" in the main tree item to develop the sub tree items, and double click "DWL Download" in the sub tree items.

| / Integration Maintenance Program |  | - $\square^{\text {a }}$ |
| :---: | :---: | :---: |
| File(E) Option(ㅇ) Hep(t) |  |  |
|  | FF Download DWL Data Area <br> 1 TV Upload EEP-ROM Data Area <br> 17 Upload Farsimile Data Area 16 Get Version |  |

8) PC side:

Specify the download file ( ${ }^{*}$.dwl).

9) PC side:

The download file is specified, download is automatically performed. The "Automatic paper selection" lamp and "Start" lamp will blink approximately 15 seconds after the download file is specified.
10) PC side:

When the message below is displayed, download is completed.
Completion message: DOWNLOAD COMPLETED

NOTE (Important):

- Be sure that the power is not turned off and the USB cable is not removed until the word "OFF" appears.

11) Main body side:

Wait until the word "OFF" appears on the operation panel.
The appearance of "OFF" indicates the completion of the download (writing into ROM).
Turn the power off.
12) After-process: Terminate the maintenance program, and turn on the power of the main body.

After the download (data transmission) has been completed, exit the software program. The USB cable can be removed at this point.

NOTE:
-For making a second connection with another machine, select the "File" and "Reconnect" in the menu bar on the maintenance program at the time of the USB being re-connected. Repeat the previous procedures from the above 5).

## * Forbidden actions while downloading (Important)

Failure in the download concerned may not allow you to conduct the subsequent download procedures. Added care should be taken to avoid having the situation below arise while downloading.
-Switching off the main body of AR-M205/M160.
-Disconnecting the download cable (USB cable).

## * If the above inhibit item occurs during downloading:

Turn OFF and ON the power.

1) If "d" (which means downloading) is displayed on the operation panel LED of the machine, perform downloading again.
2) If "d" (which means downloading) is not displayed on the operation panel LED of the machine, turn OFF the power, and press and hold the zoom (\%) key and the "Department counter end" key and turn ON the power. If, then, "d" (which means downloading) is displayed on the operation panel LED of the machine, perform downloading again.
If "d" is still not displayed, the MCU must be replaced.

## 3. Installation procedure

## A. USB joint maintenance program installation

The driver is installed by plug and play.

## B. Installation procedure on Windows XP

1) Machine side:

Executable by performing the Service Simulation No. 49-01 (Flash Rom program-writing mode).
(A word "d" appears on the operation panel to denote the download mode status.)
2) Connect the machine and the PC with a USB cable. (Be sure to use a USB cable for connection. USB2.0 of the AR-EB7 is not applicable.)
3) Check that the following display is shown.

Select "Install from a list or the specific location" and press the NEXT button.

4) Select "Include this location in the serch". If the retrieval area does not include the folder which includes the maintenance tool driver (Pegasus.inf), select "Browse"
If the folder path is properly shown, press the NEXT button to go to procedure 7).

5) Select the folder which includes the maintenance tool driver (Pegasus.inf), and press the OK button.
(When the driver is included in the "C:IPegasus" folder:)

6) Check that the path to the folder which includes the maintenance tool driver (Pegasus.inf) is shown, and press the NEXT button.

7)) Check that the following display is shown. Press the Continue Anyway button.

8) When installation is completed, the following display is shown. Press the Finish button.

The installation procedure (on Windows XP) is completed with the above operation.

## C. Installation procedure on Windows 2000

1) Machine side:

Executable by performing the Service Simulation No. 49-01 (Flash Rom program-writing mode).
(A word "d" appears on the operation panel to denote the download mode status. )
2) Connect the machine and the PC with a USB cable. (Be sure to use a USB cable for connection. USB2.0 of the AR-EB7 is not applicable.)
3) Check that the new hardware search wizard is shown. Press the NEXT button.

4) Select "Serch for a suitable driver for my device" and press the NEXT button.

5) Select "Specify a location" and press the NEXT button.

6) Press the "Browse" button. Specify the folder which includes the maintenance tool driver (Pegasus.inf)

7) Specify the folder which includes the maintenance tool driver (Pegasus.inf), and press the OPEN button.
Check that the path to the folder which includes the maintenance tool driver (Pegasus.inf) is properly displayed, and press the OK button. (When the maintenance tool driver is included in the folder of "D:\Pegasus")

8) Press the NEXT button, and installation is started.

10) When installation is completed, the following display is shown. Press the Finish button.

The installation procedure of the joint maintenance program on Windows 2000 is completed with the above operation.

## [13] ELECTRICAL SECTION

## 1.Block diagram

## 2.Circuit descriptions

## A. Main PWB (MCU)

(1) Operation circuit

## a. General

The operation circuit is composed of the key matrix circuit and the display matrix circuit.

## b. Key matrix circuit

Select signals SELIN 1-3 are sent from the CPU of the MCU to the selector in the operation circuit.
The signals detecting OFF/ON of the key are sent to the CPU as KIN 1 2.

## c. Display circuit

The display is controlled by sending the data signal from the CPU of the MCU, the clock signals, and the latch signals from the ASIC to the LED driver in the operation circuit.

## (2) I/F circuit

## a. General

The I/F circuit is composed of the USB driver and the IEEE1284 driver, and performs hard interface with the ASIC (MCU PWB).

## b. USB circuit

With the USB driver, the differential signals (analog) of USB are converted into digital signal, which are sent to the ASIC. In the reverse procedure, interface between the ASIC (engine) and the host is performed.

## c. IEEE1284 circuit

The IEEE1284 driver is used to perform interface between the ASIC (engine) and the host.

## (3) Carriage unit

## a. General

The carriage unit is provided with the CCD PWB, the inverter PWB, and the lamps. It scans documents and transfers AD-converted image data to the ASIC.

## b. CCD PWB

The CCD on the CCD PWB employs the color image sensor uPD8861 of 5400 pixels $\times 3$ lines, and scans documents in the main scanning direction in the resolution of 600dpi/US letter size.
Image data scanned by the CCD are inputted to the AFE (AD9826), and subject to CDS, amplification, and AD-conversion. Then digital data are outputted to the MCU PWB and to the ASIC, which performs image process of the digital data.

## c. Lamp inverter PWB

The transformer is controlled by the lamp control signal from the MCU PWB. The transformer output controls lighting of the cool cathode ray tube.

## B. DC power circuit

The DC power circuit directly rectifies the AC power and performs switching-conversion with the DC/DC converter circuit, and rectifies and smoothes again to generate a DC voltage.
The constant voltage control circuit is of $+5 \mathrm{VEN} .+24 \mathrm{~V}$ are of the non-control system by winding from the +5 VEN winding. As shown in fig ( 1 ), +24 V , and +5 V are provided with the ON/OFF function by external signals. +3.3 V is outputted from +5 VEN to the regulator IC. Refer to the block diagram, fig (1).

fig (1) Block diagram

## (1) Noise filter circuit

The filter circuit is composed of $L$ and $C$. It reduces common noises and normal mode noises generated from the AC line.
The common noise means that generated in each line for GND. Its noise component is delivered through C001, C003, and C007 to GND.
The normal noise means that overlapped in the AC line or the output line. It is attenuated by C002, L001, C006, and L002. Refer to fig (2).

fig (2) Noise filter circuit
(2) Rush current prevention circuit and rectifying/ smoothing circuit

fig (3) Rush current prevention, rectifying/smoothing circuit
fig (3) Rush current prevention, rectifying/smoothing circuit Since the AC power is directly rectified, if there were not this rush current prevention resistor (TH001), an extremely large rush current would flow due to a charging current flowing through the smoothing capacitor C010 when turning on the power.
To prevent against this, the rush current prevention resistor TH001 is provided between the rectifying diode D002 and the smoothing diode C010, suppressing a rush current.
The rectifying/smoothing circuit rectifies a $50 / 60 \mathrm{~Hz}$ AC voltage with the rectifying circuit, and smoothes it with the smoothing capacitor C010.

fig (4) Inverter and control circuit
This circuit is one-stone separate excitation DC-DC converter called flyback converter, as shown in fig (4).
When an electromotive voltage of IC is applied through D012, R005, and R006 to IC002, IC002 oscillates to conduct Q001.
As a result, a voltage is applied to the primary winding of the converter transformer (T001) and at the same time a voltage is generated in the driving winding of IC002 to operate IC002. Then IC002 turns ON/OFF Q001 at the frequency of about 70 KHz determined by R016.
Under the ON state, the voltage in the secondary winding is reversed to the diode D103 and no current flows through the secondary winding of T001.
Under the OFF state, the current flowing through the primary winding is in the same direction as the primary winding, conducting D103 and transmitting energy to the secondary winding. Refer to fig (4).

fig (5) Operation waveform of the flyback converter

The control circuit is subject to negative feedback from the secondary side as shown in fig (4). A photo coupler (PC002) is employed to insulate between the primary side and the secondary side to feed back the control signal to the primary side.
When the output voltage is increased by energy transmission from T001, the voltage detected by R109 and R111 is compared with the reference voltage of IC102. When it exceeds the reference voltage, the current flowing through IC102 (that is, the photo diode current of PC002) is increased and transmitted to the primary side. Then the potential at the feedback pin (2 pin) of IC102 is decreased to control Q001. Therefore, the change in the output voltage on the secondary side is passed through IC102 and PC002 to control Q001, stabilizing the output voltage.

## (4) Overcurrent protection circuit (Primary side)

The inverter circuit of the primary side is connected with the current detection resistor R012. When an overcurrent occurs in the secondary side, the current flowing through the primary side inverter Q001 is increased. The current is detected by R012, and passed through R013 to IC002 overcurrent restricting pin ( 3 pin ) to turn OFF Q002, shutting off all power. To resupply the power, turn off and on the power. Refer to fig (4).

## (5) Rectifying/smoothing circuit (+5V)

fig (6) Rectifying/smoothing circuit
The high frequency pulse generated by the inverter circuit is decreased by the converter transformer, rectified by the high frequency diode D103, and smoothed by C103 and C104.

fig (7) +5 V rectifying/smoothing circuit voltage waveform

## 3.Actual wiring diagram

ACTUAL WIRING DIAGRAM 1/7

## LEAD-FREE SOLDER

The PWB's of this model employs lead-free solder. The "LF" marks indicated on the PWB's and the Service Manual mean "Lead-Free" solder. The alphabet following the LF mark shows the kind of lead-free solder.

## Example:

## (1) NOTE FOR THE USE OF LEAD-FREE SOLDER THREAD

When repairing a lead-free solder PWB, use lead-free solder thread.
Never use conventional lead solder thread, which may cause a breakdown or an accident.
Since the melting point of lead-free solder thread is about $40^{\circ} \mathrm{C}$ higher than that of conventional lead solder thread, the use of the exclusive-use soldering iron is recommendable.

## (2) NOTE FOR SOLDERING WORK

Since the melting point of lead-free solder is about $220^{\circ} \mathrm{C}$, which is about $40^{\circ} \mathrm{C}$ higher than that of conventional lead solder, and its soldering capacity is inferior to conventional one, it is apt to keep the soldering iron in contact with the PWB for longer time. This may cause land separation or may exceed the heat-resistive temperature of components. Use enough care to separate the soldering iron from the PWB when completion of soldering is confirmed.
Since lead-free solder includes a greater quantity of tin, the iron tip may corrode easily. Turn ON/OFF the soldering iron power frequently.
If different-kind solder remains on the soldering iron tip, it is melted together with lead-free solder. To avoid this, clean the soldering iron tip after completion of soldering work.
If the soldering iron tip is discolored black during soldering work, clean and file the tip with steel wool or a fine filer.

## CAUTION FOR BATTERY REPLACEMENT

(Danish) ADVARSEL!
Lithiumbatteri - Eksplosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandoren.
(English)

## Caution!

Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to manufacturer's instructions.
(Finnish) VAROITUS
Paristo voi räjähtää, jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan suosittelemaan tyyppiin. Hävitä käytetty paristo valmistajan ohjeiden mukaisesti.
(French) ATTENTION
Il y a danger d'explosion s' ily a remplacement incorrect de la batterie. Remplacer uniquement avec une batterie du même type ou d'un type équivalent recommandé par le constructeur.
Mettre au rebut les batteries usagées conformément aux instructions du fabricant.
(Swedish) VARNING
Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.

## (German) <br> Achtung

Explosionsgefahr bei Verwendung inkorrekter Batterien.
Als Ersatzbatterien dürfen nur Batterien vom gleichen Typ oder vom Hersteller empfohlene Batterien verwendet werden. Entsorgung der gebrauchten Batterien nur nach den vom Hersteller angegebenen Anweisungen.

## CAUTION FOR BATTERY DISPOSAL

(For USA, CANADA)
Contains lithium-ion battery. Must be disposed of properly. Remove the battery from the product and contact federal or state environmental agencies for information on recycling and disposal options.
