

Service Manual

CMV1760

17" Colour Computer Monitor

Effective: June 98 CMV1760SERV

TABLE OF CONTENTS

A. Brief Specification	$A-1 \sim A-3$
B. Important Servicing Precautions	R-1 - R 2
C. Location of Controls.	
D. Circuit Description.	D.1 - D.4
E. General Adjustment	D-1 ~ D-4 □ 1
F. Block Diagram	E1 E4
G. Trouble Shooting Guide.	
H. Parts List	
A A A A A A A A A A A A A A A A A A A	H_1 H_15

A. SPECIFICATIONS:

1. SCREEN

17" F & S, 0.28mm, Antistatic coating.

2. POWER SOURCE

120V 60Hz 220V 50Hz

3. POWER CONSUMPTION

130W (max.)

4. INPUT SIGNAL

VIDEO

Analog R. G. B.: 0.7Vpp (positive)

SYNC

TTL level, H, V separate, composit sync, positive or negative

polarity.

5. INTERFACE

15 Pin D type connector

6. RESOLUTION

1280 X 1024 pixels (Non-interlace)

7. RECOMMENDED TIMING CHART

Item	Description:
A	Total time
B	Active display area including borders
C	Active display area excluding borders
. D	Left/Top border
E	Right/bottom border
F	Blanking time
G	Frontporch
Н	Sync-width
	Backporch

B. IMPORTANT SAFETY INSTRUCTION

Prior to using this manual, please ensure that you have carefully followed all the procedures outlined in the user's manual for product.

- 1. Read all of these instructions.
- 2. Save these instructions for later use.
- 3. Follow all warnings and instructions marked on the product.
- 4. Unplug this product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
- 5. Do not use this product near water.
- 6. Do not place this product on an unstable car, stand or table. The product may fall, causing serious damage to the product.
- 7. Slots and openings in the cabinet and the back or bottom are provided for ventilation; to ensure reliable operation of the product and to protect it from overheating, those openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register, this product should not be placed in a built-in installation unless proper ventilation is provided.
- 8. This product should be operated from the type of power source indicated on the marketing label. If you are not sure of the type of power available, consult your dealer or local power company.
- 9. This product is equipped with a 3-wire grounding type plug, a plug having a third (grounding) pin. This plug will only fit into a grounding-type power outlet. This is a safety feature. If you are unable to insert the plug into the outlet, contact your electrician to replace your obsolete outlet. Do not defeat the purpose of the grounding-type plug.
- 10. Do not allow anything to rest on the power cord. Do not locate this product where persons will walk on the cord.
- 11. If an extension cord is used with this product, make sure that the total of the ampere ratings on the products plugged into the extension cord do not exceed the extension cord ampere rating. Also, make sure that the total of all products plugged into the wall outlet does not exceed 15 amperes.
- 12. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a risk of fire or electric shock. Never spill liquid of any kind on the product.
- 13. Do not attempt to service this product yourself, as opening or removing covers may expose you to dangerous voltage points or other risks.
 Refer all servicing to service personnel.

- 14. Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:
 - A. When the power cord or plug is damaged or frayed.
 - B. If liquid has been spilled into the product.
 - C. If the product has been exposed to rain or water.
 - D. If the product does not operate normally when the operating instructions are followed. Adjust only those controls that are covered by the operating instructions since improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to normal operation.
 - E. If the product has been dropped or the cabinet has been damaged.
 - F. If the product exhibits a distinct change in performance, indicating a need for service.

D. CIRCUIT DESCRIPTION

1. Power circuit

The power circuit includes the start up, mode control operation, and OCP circuit. Please refer to the circuit diagram.

a) Start up circuit

The R908 and R909 provide the start up current of I901.

The turn-on and turn off thresholds of under-voltage lockout circuit in I901 are fixed internally at 16V

At start-up, C911 must be charged to 16V with a current no less than 1mA.

b) Current-mode control operation

As B+ of I901 (Pin 7) more than 16V, it has square waveform on the totem-pole output (Pin 6) which can be operated to +/- 1 Amp peak for driving the gate of MOSFET Q901. The current sensing resistor R915 senses the primary current waveform for current-mode PWM control and total output power limit.

c) OCP

As mentioned above the current sensing resistor R915 can limit the total power output. The voltage level of auxiliary power winding will drop with the secondary load increment. The auxiliary power voltage will be too low to drive the I901 at heavy overload output condition. Then the I901 will be shut down after start up repeatedly.

d) LED Indicator CKT

When it's power on micon, control Q009 provide voltage 5V which make green LED on; When it's without H-syn or V-syn pulsing, micon control Q001 make amber LED on, at this moment LED will become yellow ; When it's without H-syn and V-syn pulsing micon control Q001 make LED amber.

c) Degauss CKT

Micon control Q902, Q903 and RL901 on make current pass by POR901 and ADG coil is degaussing

2. Horizontal circuit

a) Horizontal first stage circuit

The main function of this stage have horizontal synchronization, free-running oscillation, AFC and horizontal-phase adjustment.

a-1 Free-running oscillation.

Free-running oscillation is handled by the voltage decided by pin 12 of 1601.

a-2 Horizontal synchronization.

If input a sync pulse to Pin 17 of I601 synchronization is achieved.

a-3 Horizontal-phase adjustment

The I601 internal circuit also has the horizontal-phase adjustment function. It is easy to add and change a DC voltage to Pin 15 of I601 complete this function.

b) Side-pin and H-size control circuit

Parabola signal from pin 36 of I601 to I701 is the side-pin control CKT. I701, Q717, Q718, Q719 complete

- c) Horizontal pre-driver circuit and driver circuit The main function of these stage is to supply enough energy to horizontal output circuit. Q703 are pre-driver circuit. T701 is driver circuit.
- d) Horizontal output stage circuit Horizontal output stage circuit belongs to diode modulation type. Q704, D702, D708 C718, C719, T701, T702, C727 are main parts of this circuit.
- e) Horizontal B+ step up circuit
 In order to keep the same high voltage of CRT and horizontal raster size, it must supply different B+ voltage according to different horizontal frequency. B+ voltage is positively proportional to the horizontal frequency. And the horizontal B+ step up circuit has this function. I601, Q710, Q715, Q716, D711, L701 and C744 are main parts of this circuit.
- Spot killer circuit
 It have very bright line or dot on the CRT screen when power turns off instantaneously, The spot killer circuit can avoid this defect. The main parts of this circuit are Q711, D720, C741, I701, Pin 8-10, ZD704, ZD705.
 X-ray protection circuit
- g) X-ray protection circuit

 It will emit x-ray and It will be harmful to human body when anode voltage of CRT is too high, The x-ray protection circuit can shut down the horizontal pulse to avoid x-ray emission. ZD702, D718 R784, R785, C743 are main parts of this circuit.
- h) Blanking circuit Q600 for Vert. Q701, Q712, Q713 for Hor.
- I) Vertical focus circuit

 The Q500 is a basic voltage magnifier, being B+ (at some 500V) provide after FBT pin 2 is duly rectified, the vertical parabola signal 1.0Vp-p goes through the I703 is in troduced into the basic polarity of Q500 and to cope with the specification of the CRT focus, VR501 is used to control the output oscillation at 165Vp-p+/-20V.
- J) Horizontal focus circuit
 The Q501 is switch type being the basic polarity from the negative horizontal pulse \int 38Vp-p
 through R513, C507 FOR INTEGRAL CONTROL AND INTEGRATION BY MEANS OF C509, Q503,
 R528 for a zig-zag wave \int (in different high/low oscillation) for the rear stage after transmitting the
 Q502.

The I500, Q503 are elements to control the range of the zig-zag oscillation where the Pin 6 takes the zig-zag wave from R517, C511 and P7 obtains the \bigcirc horizontal parabola wave (fH = 68K, V= 3.7 Vp-p; fH = 31.5K, V = 3.0 Vp-p), to P2 through D504, P3 is a basic voltage point, but it has to be connected to the deviation B+ by means of R522, R523 for compensation of the voltage values at different frequencies, thus P1 comes with different voltage outputs (fH=31.5K, V1 =0.8V, fH = 68K, V1 = 1.6V) and Q503 with the access volume in different levels.

fH = 31.5K as V1 voltage goes lower, the Q501 Vc discharges slower in less oscillation range fH = 68K as V2 voltage goes higher, the Q501 Vc discharges faster in more oscillation range

The Q504 discharges ar larger range and the signal source comes from the VR530, the original zig-zag wave and then is added with the R539 negative feedback voltage and then input into the Q504 basic polariy, the Vc obtains 46 Vp-p and when going through the Q505, Q506 for buffering magnification sent to T501 which the primary number of rings goes large, making the initial \ times and the CRT focus may obtain the required voltage value. Therefore, the dynamic focus of this type opts this type, that is to say, the T501. Then the high and lower parabolas shall come in different parabola waves to maintain the voltage value of the focus at fixed level.

3. Vertical circuit

The vertical circuit includes pre-driver circuit, output circuit and vertical-size preset circuit, and vertical f to v

a) Vertical pre-driver circuit

- The function of pre-driver circuit have synchronization, free-running oscillation and sawtooth pulse
- When input a vertical sync signal to pin 34 of I601 synchronization is achieved, by I601's internal
- * The internal circuit of I601 also has the sawtooth pulse generator.
- b) Vertical output circuit and vertical-size preset circuit
 - * I602 is a vertical output IC. It implements the current amplifier function.
 - * When input a DC voltage to Pin 31 of I601, It can decide the vertical raster size. If the DC voltage is higher, the vertical raster size is larger.
- 4. Video circuit

The video circuit three major portions

a) Video pre-Amp

I201 AN93B06K may control video pre-Amp by means of micro circuit.

b) Video amplifier circuit

I201 used as a pre-AMP which include contrast control, and clamp function. Q202+Q203, Q232+Q233, Q262+Q263 are cascodes for final-AMP VR225, VR255, VR285 are bias

c) Q204, Q234, Q264 are individual buffer transistors for signal of OSD R.G.B.

d) Q296, Q236, Q266 are individual buffer transistors for signal of OSD R.G.B. blanking.

5. MICRO CIRCUIT

A short description of the key related IC's is given below

a) MCU: PHILIPS PCE84C886

a-1 8.bits CPUa-2 8K * 8 ROM

a-3 192 * 8 RAM

a-4 Twelve quasi-bi-directional I/O ports and maximum sixteen derivative I/O ports.

a-5 9 PWM (6-bit * 4, 7-bit * 4 and one 14-bit).

a-6 4 OSD outputs (R/G/B and FB).

a-7 Onc 8-bit timer/event counter (T1) and one 8-bit counter triggered by external input (T3).

a-8 4 single level vectored interrupts:

INTN, T1, I2C, and V-SYNC.

a-9 OSD features:

display RAM

: 64 * 10 (bit)

character fonts

: 64 (including 2 special codes)

character bitmap

: 12 * 10

character size character color : 1H/1V, 1H/2V, 11H/3V and 1H/4V.

: 8 (character-by-character based)

background color

: 8 (character-by-word based)

- b) EEPROM: ATMEL AT24C02 (256 * 8 bit = 2K bits) 24LC02 is an 2K bits 5V electrically erasable programmable read only memory (EEPROM) organized as 256 by 8 bits. The stored information is electrically alterable on a word-by-word basis
- c) LM7805 : Power regulator (+12V -->> +5V)
- d) LM324: OP (4 items)
- e-1 I001 84C886 is a 8 bits micro-controller and heart of the BUS controlled monitor. 84C886 has two main function. One is to detect the timing mode (by H-, V-, HP, VP) from the PC, the other is to scan the key board.
 - When the 84C886 detect the right timing it read the correspondent data from the EEPROM and place the data to the O/P of PWM.
 - After 84C886 detect which key is pressed, it show the OSD and change the PWM value, according which icon is selected.
- e-2 84C886 comprises 9 PWMs (pulse width resolution, 6-bit * 4, 7-bit * 4 and one 14-bit) to control 9 functions. The PWMS are individually programmed using a 6-bit (7-bit) word to select an output from one of 64 (128) voltage steps. The maximum output voltage of all PWMs is set by the Vdd and there solution is approximately (Vdd-0.4) / 64 or
- e-3 The system clock is provided by a 10MHz crystal connected to pin 31, 32 of I001. R008 - R016 and C012 - C018, C010, C020 are integrators that transfer pulse width to DC voltage. R001 - R003 and C002 constructs an external R-C to program the PLL. C001 is a decoupling capacitor to stabilize the DC supply voltage for 84C886.
- f) AT24C02 contain the data of timing, factory default PWM value, CS value...et. According to these data, 84C886 can decide the suitable PWM value for different timing.
- g) I003 LM7805 is a power regulator IC, it switches 12V to 5V to supply the whole circuit.
- h) LM324 according to the I/P (+12V) & O/P of LM7805, to generate reset signal and supply the
- I) I008 is a sync PROCESSOR.

E. GENERAL ADJUSTMENT

- 1. B+ 15.1V adjustment: VR901
 - a) Connect the positive lead of multi-meter to D917 (--), negative lead to chassis ground.
 - b) Adjust VR901 to obtain a 15.1V reading.
- 2. High Voltage adjustment: VR702
 - a) Turn off the power and connect the positive lead of high voltage voltmeter to the tube anode, negative lead to Chassis Ground.
 - b) Turn on the power of display at least 15 minutes.
 - c) Adjust VR701 to obtain a 25.5KV reading.
- 3. Focus adjustment:
 - a) Display any character all over the screen.
 - b) Set contrast max. and brightness in cut off position.
- c) Adjust focus H/V VR until the 1/4 and 3/4 position of center Horizontal line of the picture is sharpest.
- 4. Background white balance adjustment: VR225, VR255, VR285
 - a) Set all bias VR to counter-clock wise max and let the raster be invisible.
 - b) Display black pattern (all video signals are disabled) and adjust SCREEN VR until the raster just appear to see which color comes out first (red, green or blue colors).
 - c) Adjust bias VR of the other 2 colors to get gray raster. (9300K + 27 M.P.C.D)
 - d) Adjust SCREEN VR to let the gray raster no larger than 0.12 FT-L.
- 5. White balance adjustment:
 - a) Input the mosaic pattern and set contrast SW to max...
 - b) Connect the probe of scope on G-Cathode.
 - c) Adjust VR261 to get G-color 110 CD/M².
 - d) Adjust VR231, VR201 to get the white pattern (9300K + 27 M.P.C.D)
